

Junior Javascript Developer

Eebz Ltd is a startup developing (1) an advanced digital sales tool for the video games and computer industries and (2) a video games payments system primarily aimed at markets in the Middle East, Central Asia and South Africa.

These two projects intersect in a number of ways: notably modelling video games as a product and understanding video games sales channels.

We have a number of key video games publishers utilising our sales tool, including Warner Brothers.

Our payments application is at an earlier stage, but is already supported by a major console manufacturer.

We are looking for an enthusiastic JavaScript developer to assist our build out.

This is an ideal learning role:- you will be working with one of the most recent JavaScript frameworks, Vue.js alongside a multinational team based in Krakow and Windsor, United Kingdom. Our team approach encourages our experienced developers to support a nurture development in a structured, professional environment.

Whilst primarily based out of our Krakow studio, there is opportunity, should you want, to visit and work in the UK, too. Our offices are based in Windsor, close to London.

Our tech stack includes Vue.js, Elixir and Kubernetes.

We encourage learning and experimentation and will happily support you in your journey to build out your developer knowledge through participation in conferences, experimental and trial features. We are happy, too, for you to participate in all aspects of our code development and will provide learning opportunities in our Vue and Python code bases if this is of interest. We encourage fast failure and onboard your development thoughts. We aim to be an ideal playground for you to continue to build out your skill sets.

DUTIES & RESPONSIBILITIES

- Build out of new features in JavaScript, including AI-based concepts
- Overview and review of Python pull requests

- Advice to product management through new feature analysis based on coding practicalities and business requirements
- Support of junior developers
- Improvements and suggestions to keep existing code base moving forward

REQUIREMENTS

- Some Javascript experience or good knowledge in other languages such as C++ or Python with a willingness to learn Javascript.
- A reasonable HTML/CSS knowledge
- The role will require regular use of English. We have a multinational team of Polish, Ukrainian, Italian and Chinese so can support and help non-native speakers build out English language skills.
- Excellent interpersonal skills - we are looking for a team player
- We have a strong team ethic, and require a candidate to be primarily based out of our central Krakow offices.

Our Krakow development studio is close to shops and within walking distance to the town centre.
