We Can Help You Improve Your Lakes & Ponds

Community association needs

- Is shoreline erosion causing bank failure?
- Are you concerned about the quality of water in your lakes?
- Do you want to increase the number and diversity of native aquatic plants?
- Are you looking to improve wildlife habitat in your waterbodies?
- Do you want to improve fisheries?
- Are algal blooms an issue?
- Would resident education be helpful?

Expert unbiased guidance

- **Provide independent scientific review of surface water management programs to ensure community goals are being accomplished**
- **Present professional recommendations that address your shoreline erosion problems**
- **Evaluate technologies being considered to address water quality issues**
- **Supply recommendations that improve fisheries and other wildlife habitat**
- **Deliver practical methods that reduce algal blooms and fish kills**
- **Furnish investigative research to determine causes of community water quality issues**
- **Supply recommendations on best management practices that reduce pollution**

Technical assistance

- Aquatic plant ID, mapping, and beneficial native planting plans
- Water sampling and analysis reporting with a comparison to similar waterbodies
- Algal identification with a determination of potential threats and reduction strategies
- Expert water project planning, implementation, and inspections
- Locate and apply for grants that fund community programs
- Professional maintenance and enhancements to stormwater ponds, shorelines, and community aquatic conservation areas
- Combined single service of pond mowing, cleaning, and habitat maintenance
- Water resource education programs for your Board and residents on stormwater, water quality, aquatic plants, fisheries, etc.
