Whether we are newly diagnosed or a long-term survivor—living with HIV can feel lonely.

U = U

U=U means that people with HIV who achieve and maintain an undetectable viral load—the amount of HIV in the blood—by taking antiretroviral therapy (ART) daily as prescribed cannot sexually transmit the virus to others.

Starting treatment right away is important

Enrolling in Illinois HIV Care Connect will enable you to receive the care and support you need while living with HIV. Improvements in treatment and access to care have enabled many people with HIV to live full, busy lives in good health. However, you still must receive lifelong treatment for HIV; otherwise, the condition may lead to serious complications, AIDS, or other illnesses. By consistently following your treatment regimen, you also will reduce the chances of passing the infection onto someone else.
