“Movement is Life”

Biotech Modular Bipolar Head prosthesis

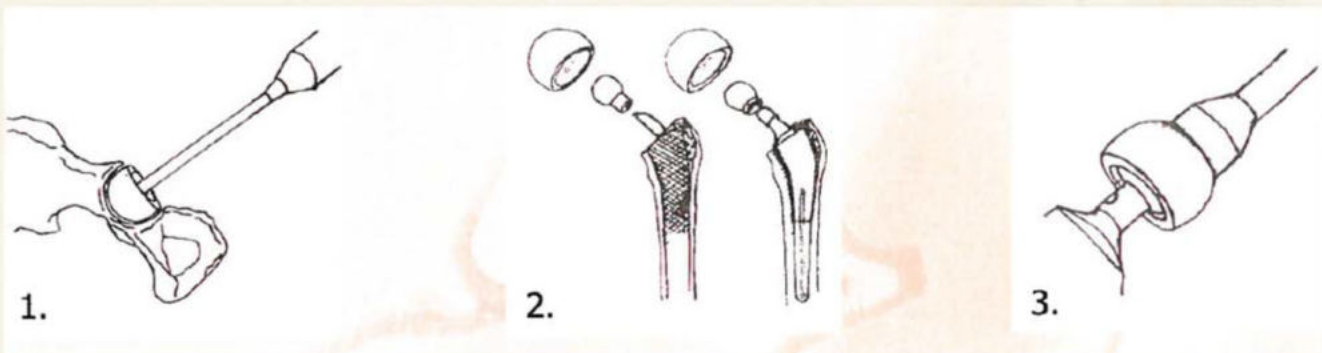

The **Bipolar Head** has been formed to enable the double fit in case of total primary hip arthroplasty. The wide range of sizes and the large contact surface provide the preservation of the acetabular cartilage. The head is compatible to all Biotech femoral stems.

Trial of sizes

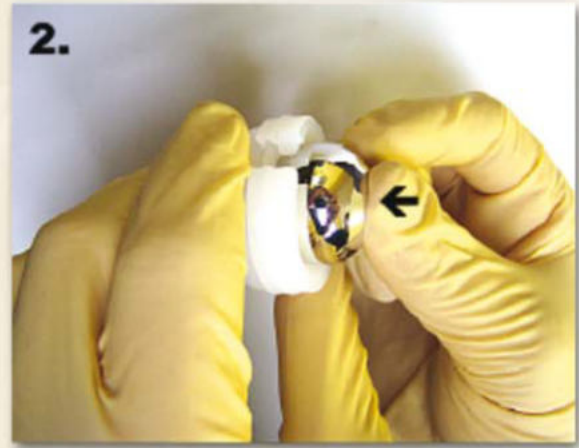

The surgeon has to use the Bipolar trial heads with their handle to specify the size of the acetabulum (1. picture). The Biotech modular stem rasp system also allows for the trial of the neck size once the rasping procedure has been completed. Simply remove the rasp handle and replace it by a trial head-neck component, inserting the Bipolar trial head into the acetabulum. The trial procedure can be done with the help of the femoral stem implant as well (2. picture).

Insertion

It is recommended that the prosthesis taper is thoroughly cleared from any blood and/or debris before the final head is attached. Then the appropriate Bipolar head is placed on the clean and dried taper and lightly tapped with the head impactor. Finally, the hip joint is reduced and the usual closing procedure is made (3. picture).
