CONTRÔLEURS DE FREINS ÉLECTRONIQUE

PRODUCT CODE: ULT070T90885

- For trailers with 2, 4, 6 ir 8 brakes.
- Digital display depicts voltage delivery to trailer during braking
- No level adjustment necessary - it adjusts itself to varying terrain as you drive
- Great for backing into tough spots! Works proportionally in reverse with the ability to disable when not needed
- Produces stops that are in proportion to vehicles deceleration rate
- Continual diagnostics check for proper connection, shorted magnet conditions and much more
- "Boost" feature gives users the ability to apply more initial trailer braking power when towing heavier trailers

One of the best ways to upgrade your truck is to add nerf bars to your vehicle. Like any great truck accessory, truck steps and nerf bars both look great and functionally improve getting in and out of your rig.

Improve the appearance and safety of your vehicle with custom tailored LED lighting options.

Safely experience dramatic performance gains in every day driving without voiding the warranty.

O.E.M. Performance Remapping Program
REVERSED ENGINEERED TUNING®

The O.E.M. performance remapping program software is designed by a group of engineers that work at a major automobile manufacturer in Stuttgart Germany. They prepare software for the private racing community and select European car manufacturers. The principle process of using the car's original software and reverse engineering its perimeters safely, allows the automobile to perform significantly better without voiding the warranty. All diagnostic settings and codes are kept intact while dramatic performance gains are experienced in every day driving. This process of enabling vehicules to run more efficiently at lower rpms results in less wear and tear and better fuel economy. This remapping process permits engines to run full strength at low rpms.
