

About Us in-Studio, LLC

in-Studio Music Technology Program develops students to have the commercial recording engineering and music producing skills in Music Production and Technology.

As educators, studio owners, professional producers and engineers, we have 30 years of experience in our industry and we are imparting our knowledge to the future music creators to enjoy a life of fulfillment in achieving their dreams. The testimony of our students are amazing, from continued education at Colleges and Universities, to successful careers working for high profile clients, to record making and touring. It is our sincere hope that you will join us and enroll in the Music Production and Technology Program.

Students will be required to pass AVID Pro Tools music software exams. AVID is the leader in music software technology. This accomplishment will earn the student certifications in the music industries studio standard music software used in worldwide studios.

Our academic program has 16 courses over a one year time period, students learn progressively music theory that leads and applies to songwriting and producing music effectively, students in parallel learn the art of sound design and all aspects of audio engineering by way of learning AVID's Pro Tools, the industry leader in music technology software. Ableton Live music software, highly popular in EDM and Rap Music is included in the training. Students develop commercial level abilities to invent the song and design the sound in a professional commercial recording studio having access and use of today's latest in audio technology.

Networking, observation, and involvement of real world sessions are important in our industry and our students participate and contribute in them. This activity promotes student learning during classes and motivates students to excel by being part of real world sessions that they assisted in. It gives students an optical perspective of how the techniques they are learning are applied in professional commercial sessions.

Ultimately student final project includes the student producing his/her own complete "Long Play" LP record in the capacity of a songwriter, music producer, and audio engineer.

This is a defining accomplishment and experience. Student utilizes and applies to their project the content from courses with hands on experience in live recording sessions and completes over the program a complete "long play" LP album recording at the professional level. Student undergoes intensive training in the time and pitch aspects of music. Student learns by doing. Music training and sound design, which are included in the program, has been core to student success in developing a commercial ready release of their works.

In-Studio, LLC educational services has been a gateway to further education from many of our former students, whom continued to learn at colleges and Universities to further their opportunities and skills. Continued education for our students we encourage and promote. We have collaboration with local colleges where we train their students and we conduct lessons at the college and at our studio to give the student an experience of working in a commercial studio.

The administration is comprised of a commercial hit making studio owner and top level musician, hit making platinum engineers, professional studio musicians, and an experienced post-secondary instructor whom taught at top level schools. This team orchestrates the program to be industry driven, rigorous, and to demonstrate real world techniques to impart to the student usable methods we use to make hit records in the studio.

We are humbled and proud of our students whom have taken these skills and have obtained success. Some are composing music for the film and video industry, while others have created production companies and are building a clientele base for themselves; others have produced their own original records and are performing on live stages.
