

## **Aquatic Consultants Inc.**

*"Your Lake & Stream Experts"*

August 2, 2019

As part of our normal monthly maintenance, our biologists and technicians visited the water resources at Deer Lakes HOA on the following date(s):

07/11/2019

07/30/2019

Your lakes were assessed for aquatic vegetation problems, water quality was monitored, and overall lake condition evaluated. Following are the results of the monitoring and any subsequent treatments or management actions:

### **Trout Pond**

July 11 - Previous treatment for knotweed was partially successful, killing only a portion of the treatment area. Chara and algae was still present mainly along the shoreline. A conservative treatment was required during this visit due to the lower dissolved oxygen. A full treatment might have dropped the oxygen to an undesirable level.

July 30 - Dissolved oxygen level required a partial treatment for knotweed and surface algae. Cattails were also treated along the shoreline of the pond. Trout were observed hitting the surface for food and appeared to be extremely healthy.

We will return in August to perform our scheduled lake management and maintenance. If you have any questions or concerns, please contact me at (505) 681-2500. Thank you again for your continued confidence in our company.

Sincerely,

Jake Shandler, Fisheries Biologist  
Aquatic Consultants, Inc.
