

"T" STYLE SAFETY CLAMP & SURFACE HANDLING ASSEMBLY SAFETY PLATE

TOOL APPLICATIONS

Safety Clamps (dog collars) are used in Thru Tubing operations in conjunction with the **Safety Plate** (C plate) for safely handling and deploying the BHA into the riser section before RIH.

The teeth on the clamp grip and hold the lower part of the BHA hanging below in the riser, while spinning the lower BHA onto the upper static BHA components that are attached to the coiled tubing to make up the connection.

This method of making up the BHA is generally used in offshore operations when deploying the BHA from the drill floor down into the riser that is attached to the Wellhead immediately before stabbing the coiled tubing injector onto the stack up.

The clamp can be adjusted to the various BHA OD sizes by adding or removing sections of the clamp.

FEATURES AND BENEFITS

- Available in a range of sizes to suit all BHA OD's
- Simple, robust design ensuring ease of operation for the end user
