**LEAD-BASED PAINT SURVEY AND ASSESSMENT**  
**FT. MYERS, FLORIDA - GENERAL MAIL FACILITY**  
**(Finance/Sub. No. 113077-G11)**

**EXECUTIVE SUMMARY**

A lead-based paint (LBP) survey of the Ft. Myers, Florida - General Mail Facility (Finance/Sub. No. 113077-G11) has been completed. The survey was performed to generally identify and assess the condition of LBP-containing materials, and to provide recommended response actions based on the conditions of these materials. This report describes the survey tasks and presents the findings and recommendations.

During the LBP survey, an X-ray fluorescence spectrometer (XRF) was used to examine the painted surfaces at the facility for the presence of lead in amounts greater than 1.0 milligram per square centimeter (1.0 mg/cm<sup>2</sup>). Readings of 2,114 painted surfaces were performed and 8 confirmatory samples were collected and submitted to a laboratory for further analyses. Under U.S. Department of Housing and Urban Development (HUD) Interim Guidelines (1990), the abatement threshold for LBP is 1.0 mg/cm<sup>2</sup> if examined by XRF or 0.5 percent lead by weight if tested by laboratory analysis. For the purposes of this report, paint containing lead above the abatement threshold is considered "LBP."

The results of the LBP survey and confirmatory sampling indicate that the following materials have LBP:

- Angle kick plates (metal) 4, 5, 6, and 8 in the workroom
- Bumper poles (metal) in the vestibule (area B-137)
- Bumper poles (metal) in the workroom at areas B-137, C-102, and D-102, and at columns H-10 and G-5
- Edge of equipment pads (concrete) in all of the air handling unit areas and mechanical room G-106, except areas B-126 and pad A in area G-106
- Handrails (metal) in the computer forward system room (area B-130)

- Railings (metal) R6 through R10, R14, R17, R20 through R32, R34, R36, R37, R41, R44, R45, and R50 in the workroom
- Spill curb (concrete) at doorway in the flammable storage room (area F2-101)
- Bumper poles 8, 9, and 10, (metal) in the covered platform (area E2-104)
- Dock edges (metal) at the six spring ramps in the covered platform (area E2-104)
- Railing (metal) at compactor in area E1-117
- Lift and lift handrail (metal) at the maintenance dock (area G-102)
- Stairs (cement) at the enclosed platform (area E-118), loading platform (area E2-113), and maintenance dock (area G-102)

No inaccessible areas were identified during the survey.

Based on the condition of the LBP detected, the following recommendations are made:

- Remove or encapsulate the LBP-containing materials; or handle the LBP-containing materials in accordance with procedures outlined in an Operations & Maintenance (O&M) Plan.
- Due to the poor condition of their painted surfaces, the lift; lift handrail at the maintenance dock (area G-02); railings R7, R8, R20 through R27, R30, R31, R32, and R37 in the workroom (area E2-105), and stairs #1 and #2 at the enclosed platform (area E1-118) should be prioritized for abatement.
- An O&M Program should be developed to include preparation of an O&M Plan, employee training, and labeling of LBP.
- All work involving LBP should be conducted in accordance with applicable federal, state, and local regulations (including Occupational Safety and Health Administration regulations), and the HUD Interim Guidelines.

## 1.0 INTRODUCTION

The United States Postal Service (USPS) owns or leases nearly 35,000 buildings, any of which may contain lead-based paint (LBP). LBP in USPS buildings must be identified and controlled in order to ensure a safe and healthy work environment, and to meet Federal, state, and local regulations, as well as Postal Service policy.

The USPS contracted with Dames and Moore, Inc. (Dames & Moore) to perform LBP surveys under Contract No. 475450-94-B-0322. General project scope requirements were outlined in Work Order No. 134.00, issued by Mr. Michael A. Fahlmark, Contracting Officer of the USPS Suncoast Florida District.

This report addresses the LBP survey performed by Dames & Moore at the Ft. Myers, Florida - General Mail Facility (Finance/Sub. No. 113077-G11).

### 1.1 PURPOSE AND SCOPE

The purpose of this project was to identify, quantify, and assess the LBP in the facility and to provide recommendations for proper handling procedures and in-place management of the LBP-containing materials identified.

The LBP survey was performed in accordance with guidelines established by the U.S. Department of Housing and Urban Development (HUD). The survey report was prepared in general accordance with the USPS's "Generic Statement of Work for Lead-Based Paint Surveys and Assessments," provided to Dames & Moore in April 1995.

## 1.2 FACILITY DESCRIPTION

The following general information regarding the facility was obtained from the site contact:

Facility Name: Ft. Myers, Florida - General Mail Facility

Finance/Sub. No.: 113077-G11

Address: 14080 Jetport Loop Road  
Ft. Myers, Florida 33900-9998

Site Contact's Name, Title, and Phone Number:

Robert Kirk  
Supervisor, Maintenance Operations  
(941) 768-8096

Use of Facility: Process and Distribution Center

Total No. Employees: 520

Number and Times of Employee Shifts: Three shifts/Open 24 hours:  
11:30 p.m. to 8:00 a.m.; 7:00 a.m. to 3:30 p.m.;  
6:00 p.m. to 2:30 a.m. (main shift)

Building Construction Date: 1991

Description and Dates of Building Modifications:

Currently remodeling the lobby area;  
External smoke areas (screen with tin roof);  
Roof (overhang) added to maintenance dock in  
August/September 1995

Date Last Painted: 1991

Size of Facility: 208,051 sq ft

Is this a USPS-Maintained Facility? No

## 2.0 METHODOLOGY

During the LBP survey of the Ft. Myers, Florida - General Mail Facility (Finance/Sub. No. 113077-G11), procedures were followed as established by HUD in their document, "Lead-Based Paint: Interim Guidelines on Hazard Identification and Abatement in Public and Indian Housing," September 1990, known as the "Interim Guidelines," and in accordance with the USPS's "Generic Statement of Work for Lead-Based Paint Surveys and Assessments." This report section provides a brief description of the methodologies followed during the survey.

### 2.1 INFORMATION REVIEW AND INITIAL WALK-THROUGH INSPECTION

Dames & Moore personnel and representatives of Dames & Moore's subcontractor, Banks Consulting Associates, Inc. (Banks), attended a project kick-off meeting at the Ft. Myers Page Field Branch on September 13, 1995. The purpose of the meeting was to review the proposed LBP survey, schedule performance of the survey, and review the Scope of Work. The survey was conducted on September 21 through 23, 1995 by Banks.

The Facility Manager was interviewed regarding knowledge of known or suspected LBP, and to obtain general information about the construction, maintenance, and operation of the facility. The site contact was also asked about written construction specifications, building drawings, and previous lead surveys of the facility. Construction specifications and building drawings were available for review.

Following the review of the building drawings, an initial walk-through inspection of the building was performed. Accessible areas of the facility were observed and the locations of damaged, chipped, or peeling paint were noted, if present. No inaccessible areas were identified. Photographs of representative painted materials were obtained using 35-millimeter film.

## 2.2 LEAD-BASED PAINT SURVEY

### 2.2.1 Lead Sampling Strategy

All accessible painted surfaces on the interior and exterior of the building were screened for LBP with an X-ray fluorescence spectroscopy instrument (XRF) in accordance with the HUD Interim Guidelines. This field portable instrument uses a hermetically sealed radioactive isotope to stimulate fluorescence of lead atoms in paint. The XRF distinguishes the lead X-ray from other interfering radiation to produce a graph of lead X-ray intensity relative to the intensity of other interfering radiation. Comparison of the two readings provides a measurement of lead concentration in the paint overlying the substrate. The radioactive source is shielded to minimize the operator's exposure, and when properly used the amount of radiation exposure is negligible. For this project, a Spectrum-Analyzer XRF was used (Make: Niton XL; Model: 309).

Sampling error using an XRF may result from the fact that it is impractical to test every portion of every surface within a building. This means that some LBP surfaces may be missed. To offset the potential errors that are associated with XRF usage, all accessible painted components within the USPS facility were screened at multiple locations, if present, with the XRF.

In accordance with the HUD Interim Guidelines, the types of painted surfaces that are screened when encountered include, but are not limited to: doors, door jambs, walls, floorboards, shelves, ceilings, handrails, bumper poles, and trim. At the Ft. Myers, Florida - General Mail Facility (Finance/Sub. No. 113077-G11), 2,114 different painted surfaces were screened.

The results of the screening were used to select which painted surfaces should be sampled for confirmation of lead concentration. The action level as defined in HUD regulation 24 CFR 965.706 (c) (53 FR 20803, June 6, 1988) and the HUD Interim Guidelines (April 1, 1990, revised September 28, 1990) is a lead concentration above the level of 1.0 mg/cm<sup>2</sup> when using a portable XRF instrument. To evaluate whether readings on tested surfaces exceeded the action level, the readings were classified as positive, inconclusive, or negative. Positive Spectrum XRF results are those which are 1.3 mg/cm<sup>2</sup> or greater; negative readings are those below 0.8 mg/cm<sup>2</sup>. Inconclusive readings are those between 0.8 mg/cm<sup>2</sup> and 1.29 mg/cm<sup>2</sup>. The number of positive, negative, and

inconclusive readings were then totaled for each component (door, wall, handrail, etc.) and the "Flowchart of Decision Rules for Multi-Unit Testing with a Spectrum-Analyzer XRF" (see Appendix A-1) was used to assess which units are assumed positive for lead and should be considered for abatement, which should be sampled for confirmatory laboratory analysis, and which can be assumed to be non-LBP containing.

The above-described HUD Decision Rules were used to reasonably conclude that LBP is not present above the 1.0 mg/cm<sup>2</sup> regulatory level on numerous surfaces, based upon the negative XRF readings only. Seven XRF readings were inconclusive. Seven paint chip samples were collected from these materials. One paint chip sample was collected from a material that had a reading near the inconclusive range. All samples were submitted for confirmatory laboratory testing, as described in the following sections.

### **2.2.2 Paint Sampling Technique**

Painted surfaces selected for confirmatory analysis were sampled using a coil-type heat gun. The area of paint was heated and then lifted off by sliding a thin blade along and underneath the paint. The section of paint was removed down to the underlying wood, metal, or plaster. Care was taken to avoid including the wood, paper, or plaster in the sample. Following collection, the sample was placed into an appropriate clean sample container and labeled.

### **2.2.3 Paint Sample Identification**

Each paint sample was assigned a unique sample identification (ID). The ID consisted of an alphanumeric designation beginning with the letters "FTM-GMF-L", which denote the facility, followed by the sample number.

#### **2.2.4 Laboratory Analysis of Paint Samples**

The bulk paint chip samples collected during this survey were submitted to Environmental Laboratories Services, Inc. (EHS) of Richmond, Virginia. EHS is accredited by the National Institute of Standards and Technology (NVLAP) and participates in the Environmental Lead Proficiency Analytical Testing (ELPAT) Program (ID #08648).

The paint chip samples were analyzed using Atomic Absorption Spectrometry (AAS) procedures in accordance with NIOSH Method 7082M. A statement of the laboratory protocols used by EHS is presented in Appendix A-2.

#### **2.2.5 LBP Hazard Assessment**

During the initial walk-through inspection of the building and the XRF screening, potential LBP hazards such as damaged, chipped, or peeling paint were noted, if present. Other factors, including accessibility of the potential hazard area, were evaluated in general accordance with guidance provided by HUD. A description of the evaluation factors is presented in Appendix A-1.

### 3.0 FINDINGS AND RECOMMENDATIONS

The findings of the LBP survey are presented in this section. Sections 3.1 through 3.3 describe the findings of the LBP survey and Section 3.4 describes the recommendations based upon the findings of the survey. Backup documentation related to the LBP surveys is presented in Appendices A through I.

Overall, the LBP hazard potential for the Ft. Myers, Florida - General Mail Facility (Finance/Sub. No. 113077-G11) is estimated as moderate. The condition of the LBP surfaces was observed to range from poor to good.

The abatement threshold for LBP is defined by HUD as greater than or equal to 1.0 mg/cm<sup>2</sup> (surface area concentration), or more than 0.5 percent by weight (5,000 parts per million), as measured by AAS or inductively coupled plasma atomic emission spectroscopy (ICP-AES). The paint chip samples collected were analyzed by AAS, and were confirmed to contain LBP.

#### 3.1 INTERIOR MATERIALS WITH LBP

The LBP survey of the interior surfaces at the Ft. Myers, Florida - General Mail Facility (Finance/Sub. No. 113077-G11) identified the following LBP-containing materials:

- Angle kick plates (metal) 4, 5, 6, and 8 in the workroom (Photo 1)
- Bumper poles (metal) in the vestibule (area B-137)
- Bumper poles (metal) in the workroom at areas B-137, C-102, and D-102, and at columns H-10 and G-5 (Photo 2)
- Edge of equipment pads (concrete) in all of the air handling unit areas and mechanical room G-106, except areas B-126 and pad A in area G-106 (Photo 3)
- Handrails (metal) in the computer forward system room (area B-130)
- Railings (metal) R6 through R10, R14, R17, R20 through R32, R34, R36, R37, R41, R44, R45, and R50 in the workroom (Photo 4)

- Spill curb (concrete) at doorway in the flammable storage room (area F2-101) (Photo 5)

### 3.2 EXTERIOR MATERIALS WITH LBP

The LBP survey of the exterior surfaces of the Ft. Myers, Florida - General Mail Facility (Finance/Sub. No. 113077-G11) identified the following LBP-containing material:

- Bumper poles 8, 9, and 10, (metal) in the covered platform (area E2-104) (Photo 6)
- Dock edges (metal) at the six spring ramps in the covered platform (area E2-104) (Photo 7)
- Railing (metal) at compactor in area E1-117 (Photo 8)
- Lift and lift handrail (metal) at the maintenance dock (area G-102) (Photo 9)
- Stairs (cement) at the enclosed platform (area E-118), loading platform (area E2-113), and maintenance dock (area G-102) (Photo 10)

### 3.3 NON-LBP-CONTAINING MATERIALS

The XRF survey results indicated that the following are non-LBP-containing materials:

- Air vent (metal) to power main vault on the building exterior
- Angle kick plate 7 (metal) in the workroom
- Base molding (vinyl) throughout the facility
- Beams (metal) for the interior ceiling and dock ceiling, and vertical beam (metal) in area E1-104 (Photo 11)
- Bumper boards (wood) throughout the facility and on the facility exterior (Photos 2 and 6)
- Bumper poles (metal) throughout the facility except as noted in Sections 3.1 and 3.2 (Photo 10)
- Cable tray (metal) in the battery area (area E1-105)

- Ceilings (concrete) throughout the facility and at the overhangs on the building exterior
- Ceilings (drywall) throughout the facility and ceiling on the dock (metal)
- Ceilings (tile) in the human resources test area (area A-123) and Manager's office (area B-102)
- Ceiling pans (metal) throughout the facility (Photo 11)
- Chair rails (wood) throughout the facility
- Columns (drywall) in the computer area (area B-130) and supplies room (area B-135)
- Corner protectors (metal) in the computer room (area B-130), women's restroom (area B-131), and men's restroom (area B-132)
- Curb (concrete) on the building exterior
- Dock edge (metal) at lift in the covered platform (area E2-104)
- Dock edges (metal) at spring ramps in the enclosed platform (area E1-118) and loading platform (area E2-113)
- Doors and door frames (metal, plastic, and wood) throughout the facility
- Downspout (metal) on the maintenance dock (area G-102)
- Drain pipe (metal) for roof on the enclosed platform (area E1-118)
- Edges of equipment pads (concrete) in the air handling unit area B-126 and pad A in area G-106
- Handrails (metal) throughout the facility except handrails in area B-130 (computer forward system) and lift handrail at the maintenance dock (area G-102) (Photo 10)
- Two-ton hoist\crane in the battery area E1-105
- Ladders (metal) throughout the facility
- Lift (metal) at the covered platform (area E2-104)
- Mailbox frame (wood) in the contract area E1-106
- Telephone mounting board (wood) in the records room (Area B-125)
- Portals (metal) and portal sills (wood) throughout the facility (Photo 11)
- Power poles (metal) in the computer forward system area B-130
- Railings (metal) throughout the facility except those listed in Section 3.1
- Roll-up doors (aluminum and metal) throughout the facility
- Roof drain (metal) in the storage area B-106
- Roof supports (metal) in the supplies area B-135

- Scale platform (metal) at column J-10 in the workroom
- Screen frame (metal) in the employee entrance area F1-101
- Security gate (metal) in the server area F1-124
- Shelves (wood) throughout the facility
- Shelf support (wood) in the closet in the corridor area F2-116
- Spring ramps (metal) throughout the facility
- Structural supports (metal) and bases (cement) throughout the facility (Photo 11)
- Support columns (metal) at the maintenance dock and building exterior (Photo 10)
- Lower and upper walls (block, cement, concrete and drywall) throughout the facility (Photos 2 and 6)
- Window frames (metal) and sills (marble) throughout the facility (Photo 12)

Based upon the HUD Decision Rules, it can be reasonably inferred that these same materials in other portions of the facility, if similarly painted, are non-LBP containing.

### 3.4 RECOMMENDATIONS

Based on the condition of the LBP detected, the following recommendations are made:

- Remove or encapsulate the LBP-containing materials; or handle the LBP-containing materials in accordance with procedures outlined in an Operations & Maintenance (O&M) Plan.
- Due to the poor condition of their painted surfaces, the lift; lift handrail at the maintenance dock (area G-02); railings R7, R8, R20 through R27, R30, R31, R32, and R37 in the workroom (area E2-105), and stairs #1 and #2 at the enclosed platform (area E1-118) should be prioritized for abatement.
- An O&M Program should be developed to include preparation of an O&M Plan, employee training, and labeling of LBP. Additional aspects of the O&M Program are presented in Appendix A-1.

- All work involving LBP should be conducted in accordance with applicable federal, state, and local regulations (including Occupational Safety and Health Administration regulations), and the HUD Interim Guidelines.

**Hazards Assessments and Recommendations for Control of LBP**

General Comments

- No. 1) The condition of this building component is generally good.
- No. 2) The age of the material is the reason the condition rating is satisfactory rather than good.
- No. 3) This component should be included in an overall Operations and Maintenance Program until abatement. This Program should include periodic retesting of the component and surrounding area to determine if the lead-based paint on this component has migrated to surrounding surfaces.
- No. 4) If this component is to be removed or disturbed prior to a total comprehensive abatement project, the lead-based paint should be abated (removed or encapsulated) from the component prior to the component being removed or disturbed.
- No. 5) If there is a substantial change in the condition of this component then the lead-based paint should be abated from the surface of the component or the component should be removed and replaced.
- No. 6) Laboratory analysis by atomic absorption spectrometry confirmed that this building component is positive.

<u>Component</u>	<u>Substrate</u>	<u>Condition</u>	<u>Recommendation</u>
Angle Kick Plates Workroom	Metal	Good	<u>General Comments</u> - 1, 3, 4, 5 <u>Specific Comments</u> - NOTE: Not all angle kick plates tested positive for LBP. See "XRF" sample log.

**Banks Consulting Associates, Inc.**

<u>Component</u>	<u>Substrate</u>	<u>Condition</u>	<u>Recommendation</u>
Bumper Poles B-137 Vestibule, E2-104 Covered Platform, Workroom	Metal	Good to Poor	<u>General Comments</u> - 2, 3, 4, 5 <u>Specific Comments</u> - Note: Not all bumper poles tested positive for LBP. See "XRF" sample log. Abatement is recommended as soon as practical for the bumper poles with paint in poor condition.
Dock Edges at spring ramps E-2-104 Covered Platform	Metal	Satisfactory	<u>General Comments</u> - 2, 3, 4, 5 <u>Specific Comments</u> - None.
Equipment Pad Edges F1-116, E2-108, G-106, E1-114, A-107, & B-105	Concrete	Good to Satisfactory	<u>General Comments</u> - 1, 3, 4, 5, 6 <u>Specific Comments</u> - Note: Not all equipment pad edges tested positive for LBP. See "XRF" sample log.
Handrails B-130 Computer Forward Sys.	Metal	Good	<u>General Comments</u> - 1, 3, 4, 5 <u>Specific Comments</u> - Note: Not all handrails in this room tested positive for LBP. See "XRF" sample log.
Lift Handrail G-102 Maint. Dock	Metal	Poor	<u>General Comments</u> - 3, 4, 5 <u>Specific Comments</u> - Abatement is recommended as soon as practical due to the poor condition of the paint on this component.
Lift G-102 Maint. Dock	Metal	Poor	<u>General Comments</u> - 3, 4, 5 <u>Specific Comments</u> - Abatement is recommended as soon as practical due to the poor condition of the paint on this component.
Railings Workroom, & E1-117	Metal	Good to Poor	<u>General Comments</u> - 3, 4, 5 <u>Specific Comments</u> - Note: Not all railings tested positive for LBP. See "XRF" sample log. Abatement is recommended as soon as practical for the railings with paint in poor condition.

**Banks Consulting Associates, Inc.**

<u>Component</u>	<u>Substrate</u>	<u>Condition</u>	<u>Recommendation</u>
Spill Curb at doorway F2-101 Flammable Storage	Concrete	Poor	<u>General Comments</u> - 3, 4, 5 <u>Specific Comments</u> - Abatement is recommended as soon as practical due to the poor condition of the paint on this component.
Stairs E1-118, E2-113, & G102	Cement	Good to Poor	<u>General Comments</u> - 3, 4, 5 <u>Specific Comments</u> - Abatement is recommended as soon as practical for the stairs with paint in poor condition.

PROPERTIES: soft metal;  
 d 11.3 g/cm<sup>3</sup>; MP 327.5 °C  
 valences +2, +4 in salts

SYNONYMS: elemental lead and lead compounds except alkyl lead

SAMPLING		MEASUREMENT	
SAMPLER:	FILTER (0.8-µm cellulose ester membrane)	TECHNIQUE:	ATOMIC ABSORPTION SPECTROPHOTOMETER, FLAME
FLOW RATE:	1 to 4 L/min	ANALYTE:	lead
VOL-MIN:	200 L @ 0.05 mg/m <sup>3</sup>	ASHING:	conc. HNO <sub>3</sub> , 6 mL + 30% H <sub>2</sub> O <sub>2</sub> , 1 mL; 140 °C
-MAX:	1500 L	FINAL SOLUTION:	10% HNO <sub>3</sub> , 10 mL
SHIPMENT:	routine	FLAME:	air-acetylene, oxidizing
SAMPLE STABILITY:	stable	WAVELENGTH:	283.3 nm
BLANKS:	2 to 10 field blanks per set	BACKGROUND CORRECTION:	D <sub>2</sub> or H <sub>2</sub> lamp, or Zeeman
ACCURACY		CALIBRATION:	Pb <sup>2+</sup> in 10% HNO <sub>3</sub>
RANGE STUDIED:	0.13 to 0.4 mg/m <sup>3</sup> [1]; 0.15 to 1.7 mg/m <sup>3</sup> (fume) [2]	RANGE	10 to 200 µg per sample [2,3]
BIAS:	- 3.1%	ESTIMATED LOD:	2.6 µg per sample [4]
OVERALL PRECISION (S <sub>r,r</sub> ):	0.072 [1]; 0.068 (fume) [2]	PRECISION (S <sub>r</sub> ):	0.03 [1]
ACCURACY:	± 17.6%		

**APPLICABILITY:** The working range is 0.05 to > 1 mg/m<sup>3</sup> for a 200-L air sample. The method is applicable to elemental lead, including Pb fume, and all other aerosols containing lead. This is an elemental analysis, not compound specific. Aliquots of the samples can be analyzed separately for additional elements.

**INTERFERENCES:** Use D<sub>2</sub> or H<sub>2</sub> continuum or Zeeman background correction to control flame or molecular absorption. High concentrations of calcium, sulfate, carbonate, phosphate, iodide, fluoride, or acetate can be corrected.

**OTHER METHODS:** This method combines and replaces P&CAM 173 [3] and S341 [4,5] for lead. Method 7300 (ICP-AES) and 7105 (AAS/GF) are alternate analytical methods. Method 7505 is specific for lead sulfide. The following have not been revised: the dithizone method, which appears in P&CAM 102 [5] and the lead criteria document [6]; and P&CAM 191 (ASV) [7].

**REAGENTS:**

1. Nitric acid, conc.\*
2. Nitric acid, 10% (v/v). Add 100 mL conc. HNO<sub>3</sub> to 500 mL water; dilute to 1 L.
3. Hydrogen peroxide, 30% H<sub>2</sub>O<sub>2</sub> (w/w), reagent grade.\*
4. Calibration stock solution, 1000 µg/mL Pb. Commercial standard or dissolve 1.00 g Pb metal in minimum volume of (1+1) HCl and dilute to 1 L with 1% (v/v) HCl. Store in a polyethylene bottle. Stable ≥ one year.
5. Air, compressed, filtered.
6. Acetylene
7. Distilled or deionized water.

\* See SPECIAL PRECAUTIONS.

**EQUIPMENT:**

1. Sampler: Cellulose ester filter, 0.8-µm pore size, 37-mm diameter, in cassette filter holder.
2. Personal sampling pump, 1 to 4 L/min, with flexible connecting tubing.
3. Atomic Absorption Spectrophotometer with an air-acetylene burner head and background correction.
4. Lead hollow cathode lamp or electrode dischargeless lamp.
5. Regulators, two-stage, for air and acetylene.
6. Beakers, Phillips, 125-mL, or Griffin, 50-mL with watchglass covers.\*\*
7. Volumetric flasks, 10- and 100-mL.\*\*
8. Assorted volumetric pipets as needed.\*\*
9. Hotplate, surface temperature 140 °C.
10. Bottles, polyethylene, 100-mL.

\*\* Clean all glassware with conc. nitric acid and rinse thoroughly with distilled or deionized water before use.

**SPECIAL PRECAUTIONS:** Conc. nitric acid is an irritant and may burn skin. Perform all acid digestions in a fume hood. Hydrogen peroxide is a strong oxidizing agent, a strong irritant, and corrosive to the skin. Wear gloves and eye protection.

**SAMPLING:**

1. Calibrate each personal sampling pump with a representative sampler in line.
2. Sample at an accurately known flow rate between 1 and 4 L/min for up to 8 h for a total sample size of 200 to 1500 L for TWA measurements. Do not exceed a filter loading of ca. 2 mg total dust.

**SAMPLE PREPARATION:**

- NOTE 1: The following sample preparation gave quantitative recovery (see EVALUATION OF METHOD) [4]. Steps 4 through 9 of Method 7300 or other quantitative ashing techniques may be substituted, especially if several metals are to be determined on a single filter.
- NOTE 2: The Appendix gives a microwave digestion procedure which may be necessary for complete recovery of lead from some matrices, especially epoxy-based paint.
3. Open the cassette filter holders and transfer the samples and blanks to clean beakers.
  4. Add 3 mL conc. HNO<sub>3</sub>, and 1 mL 30% H<sub>2</sub>O<sub>2</sub> and cover with a watchglass. Start reagent blanks at this step.  
NOTE: If PbO<sub>2</sub> is not present in the sample, the 30% H<sub>2</sub>O<sub>2</sub> need not be added [2,4].
  5. Heat on 140 °C hotplate until volume is reduced to about 0.5 mL.
  6. Repeat two more times using 2 mL conc. HNO<sub>3</sub> and 1 mL 30% H<sub>2</sub>O<sub>2</sub> each time.
  7. Heat on 140 °C hotplate until ca. 0.5 mL liquid remains.
  8. When sample is dry, rinse the watchglass and walls of the beaker with 3 to 5 mL 10% HNO<sub>3</sub>. Allow the solution to evaporate to dryness.
  9. Cool each beaker and dissolve the residues in 1 mL conc. HNO<sub>3</sub>.
  10. Transfer the solution quantitatively to a 10-mL volumetric flask and dilute to volume with distilled water.

NOTE: If the concentration ( $M$ ) of any of the following is expected to exceed the lead concentration ( $M$ ) by 10-fold or more, add 1 mL 1  $M$   $Na_2EDTA$  to each flask before dilution to volume:  $CO_3^{2-}$ ,  $PO_4^{3-}$ ,  $I^-$ ,  $F^-$ ,  $CH_3COO^-$ . If  $Ca^{2+}$  or  $SO_4^{2-}$  are present in 10-fold or greater excess, make all standards and samples 1% (w/w) in  $La^{2+}$  [3].

#### CALIBRATION AND QUALITY CONTROL:

11. Prepare a series of working standards covering the range 0.25 to 20  $\mu g/mL$  Pb (2.5 to 200  $\mu g$  Pb per sample).
  - a. Add aliquots of calibration stock solution to 100-mL volumetric flasks. Dilute to volume with 10%  $HNO_3$ . Store the working standards in polyethylene bottles and prepare fresh weekly.
  - b. Analyze the working standards together with the blanks and samples (steps 14 and 15).
  - c. Prepare a calibration graph of absorbance vs. solution concentration ( $\mu g/mL$ ).
12. Aspirate a standard for every 10 samples to check for instrument drift.
13. Check recoveries with at least one spiked media blank per 10 samples. Use method of standard additions occasionally to check for interferences.

#### MEASUREMENT:

14. Set spectrophotometer as specified by the manufacturer and to conditions on page 7082-1.  
NOTE: An alternate wavelength is 217.0 nm [8]. Analyses at 217.0 nm have slightly greater sensitivity, but poorer signal-to-noise ratio compared to 283.3 nm. Also, non-atomic absorption is significantly greater at 217.0 nm, making the use of  $D_2$  or  $H_2$  continuum, or Zeeman background correction mandatory at that wavelength.
15. Aspirate standards, samples, and blanks. Record absorbance readings.  
NOTE: If the absorbance values for the samples are above the linear range of the standards, dilute with 10%  $HNO_3$ , reanalyze, and apply the appropriate dilution factor in the calculations.

#### CALCULATIONS:

16. Using the measured absorbances, calculate the corresponding concentrations ( $\mu g/mL$ ) of lead in the sample,  $C_s$ , and average media blank,  $C_b$ , from the calibration graph.
17. Using the solution volumes (mL) of the sample,  $V_s$ , and media blanks,  $V_b$ , calculate the concentration,  $C$  ( $mg/m^3$ ), of lead in the air volume sampled,  $V$  (L):

$$C = \frac{C_s V_s - C_b V_b}{V}, \text{ mg/m}^3.$$

#### EVALUATION OF METHOD:

Method S341 [9] was issued on October 24, 1975, and validated over the range 0.13 to 0.4  $mg/m^3$  for a 180-L air sample, using generated atmospheres of lead nitrate [1]. Recovery in the range 18 to 72  $\mu g$  Pb per sample was 98%, and collection efficiency of 0.8- $\mu m$  mixed cellulose ester filters (Millipore Type AA) was 100% for the aerosols. Subsequent studies on analytical recovery of 200  $\mu g$  Pb per sample gave the following results [2,4]:

**Re: EHS PROJECT # 09-95-1393**

**Dear Mr. Banks:**

**You have previously requested that we return to your office any portions of lead paint samples that are not consumed during the analytical process.**

**Please be advised that all samples in EHS Project # 09-95-1393 were consumed during the analytical process and, therefore, we can not return any samples from this group to your office.**

**If I may be of any assistance regarding this matter, please do not hesitate in contacting me. I may be reached at (804) 275-4788.**

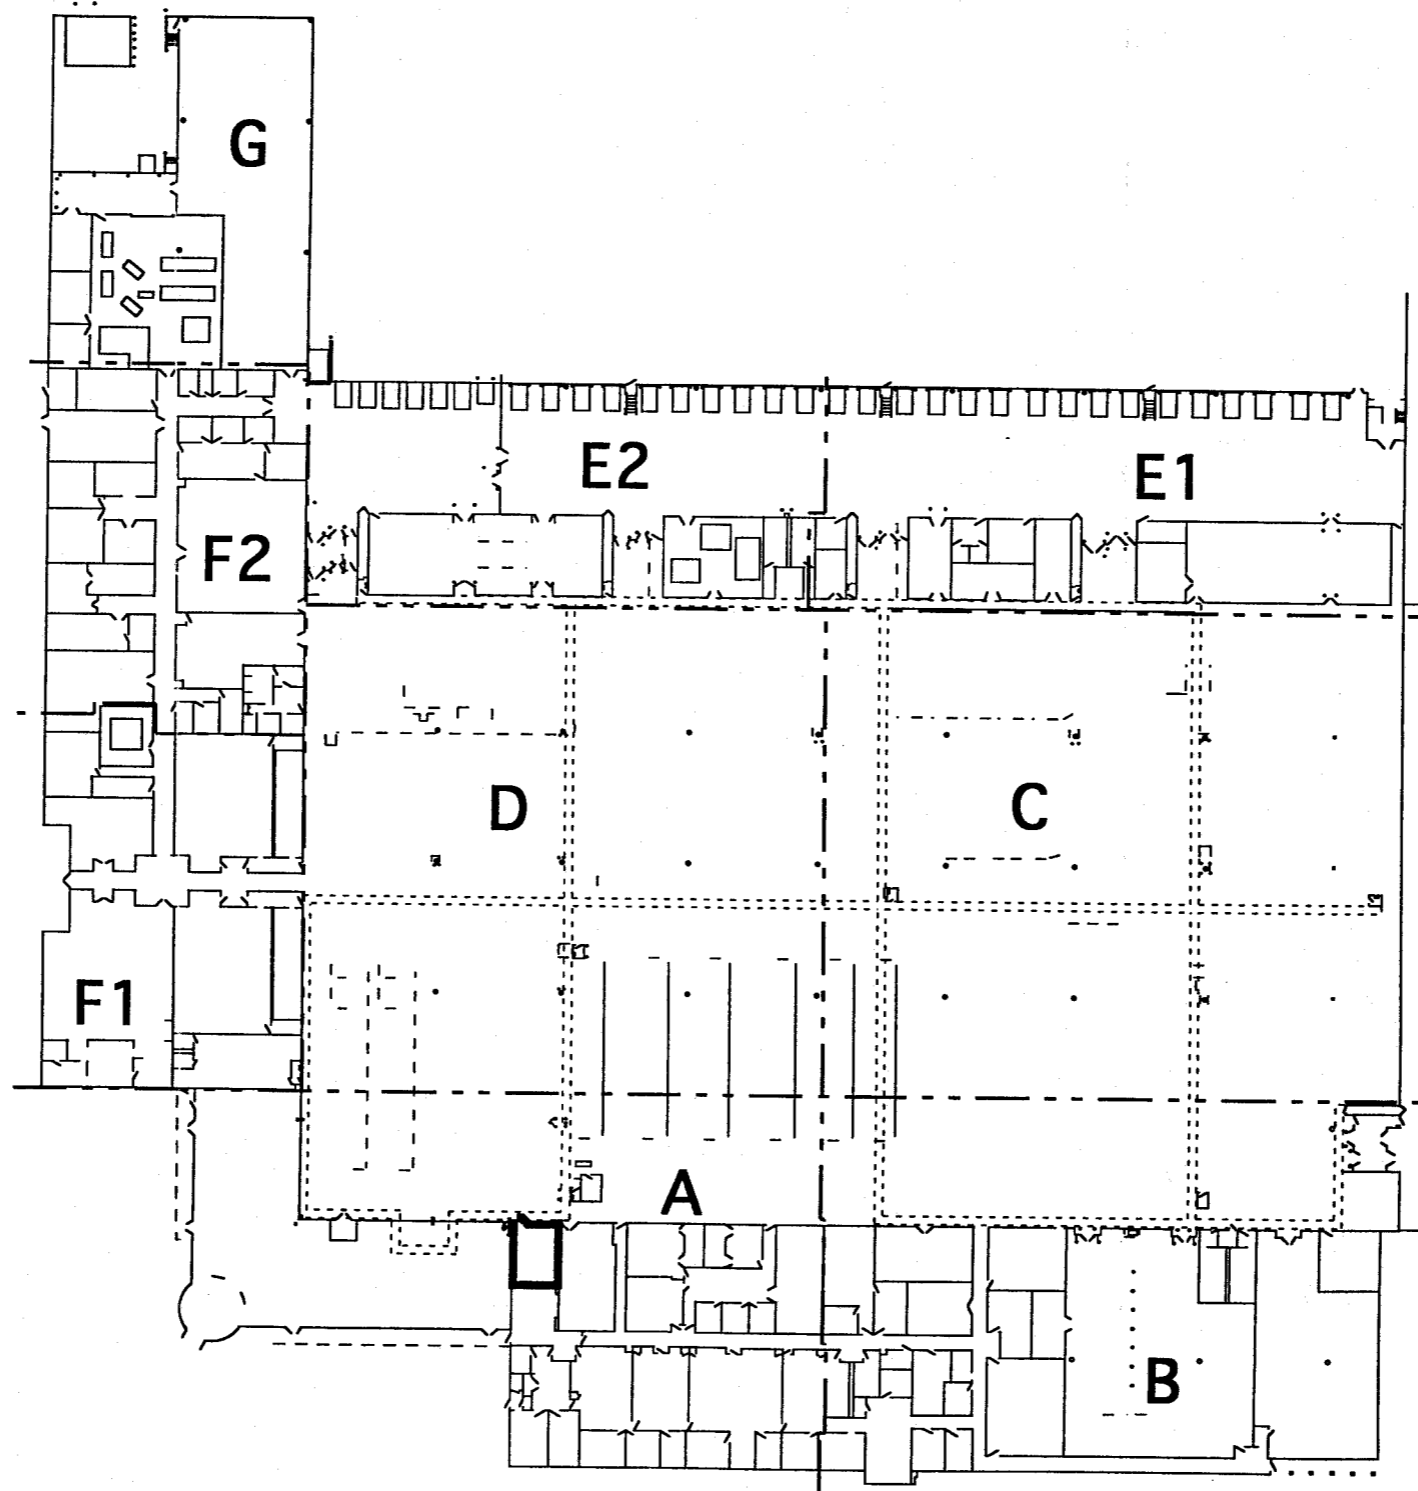

**Most truly yours,**

**Rick Buie**

**APPENDIX F**

**BACKGROUND INFORMATION ON LEAD AND  
LEAD-BASED PAINT**

## APPENDIX F

### BACKGROUND INFORMATION ON LEAD-BASED PAINT

#### General Information

Lead has been known to humankind since ancient times. It was used historically as a major component of many alloys such as bronze and solder, as well as in the manufacturing of pigments and paints. In its natural state, lead is a bluish-gray metal found in small amounts in the earth's crust. It has a molecular weight of 207.20, is solid at normal temperatures, and has no characteristic taste or smell. Lead readily tarnishes in the atmosphere but is one of the most stable fabricated metals because of its corrosive resistance to air, water, and soil (ATSDR, 1992).

Concurrent with the use of lead through history was the occurrence of "plumbism," or lead poisoning.

#### Lead Poisoning

First described by Hippocrates around 370 B.C., lead poisoning, is the oldest recognized occupational disease. Lead is a toxin affecting multiple organ systems in children and adults, from acute and chronic exposures. Acute toxic symptoms include ataxia, repeated vomiting, headache, stupor, hallucinations, tremors, convulsions, and coma. These symptoms are manifested by the encephalopathic syndrome seen in lead poisoning. Chronic exposure can cause weight loss, central nervous system effects, anemia, and damage to the kidneys. Chronic lead poisoning adversely affects the central and peripheral nervous systems, causing restlessness, irritability, and memory loss. Permanent brain damage has been noted among children. Kidney damage arising from short term ingestion of lead is reversible, while chronic exposure may lead to general degradation of the kidney. Inhalation of lead dusts can cause gastritis and changes in the liver. Lead is significantly bioaccumulated in the bones and teeth where it is stored and then subsequently released. Lead also inhibits enzymatic activity impacting the biosynthesis of heme (Patnaik, 1992).

While adults are subject to the same potential toxic effects of lead as children, a number of metabolic criteria serve to define young children and the fetus as subjects of increased risk for lead exposure and toxicity. Young children ingest and absorb a larger amount of lead per unit body measure than do adults. Children also retain a larger fraction of absorbed lead than do adults. Furthermore, children are not as efficient at sequestering circulating lead in their bones, and a higher fraction of total body lead burden is available to exert toxic effects in various target organs. In children, basal metabolism and rates of respiration are higher than in adults, and these act to enhance lead uptake and toxicity risk. For the fetus, there is no effective metabolic or anatomical barrier to lead uptake. Consequently, there is no protection at crucial time periods when important organ systems such as the central nervous system are forming (ATSDR, 1988).

### **Lead-Based Paint Usage**

As previously stated, the occurrence of adult lead poisoning within the occupational environment has been well documented through history. (Even Benjamin Franklin wrote a letter on occupational lead poisoning in 1786.) While the occurrence of lead poisoning within the workplace led to legislation that protected adult workers, it was lead poisoning within children that has led to the enactment of current legislation regarding lead-based paint (LBP). As early as 1904, a physician in Australia concluded that lead paint was responsible for lead poisoning in child patients. He postulated that ingestion occurred secondary to hand-to-mouth exposure following contact with freshly painted or sticky surfaces, or surfaces that were well worn and powdery.

By the mid-1930s, requests for limitations on the use of LBP became more frequent in the United States. Manufacturers of cribs and toys for small children had already begun eliminating lead-based paint from these items. The lead industry itself showed its awareness that LBP was a danger to young children as early as 1930 through the submittal of questionnaires regarding LBP usage among manufacturers of children's toys and furniture. This posture of initial concern by the lead industry changed to an aggressive defense in the 1940s. Despite the accumulation of a large body of knowledge of the causes and effects of lead poisoning in children over the first third of the century, lead continued to be used in exterior and interior paints, pigments, and drying compounds well into the 1940s and beyond. LBP could still be found on the market in 1970, the year that Federal legislation prohibiting its use was passed, without industry opposition (AJPH, 1989). Despite the

discontinued use of LBP, historical use resulted in hazards associated with lead-paint chips, lead dust, and lead-contaminated soils.

### **Lead-Based Paint Hazards**

Paint chips containing lead are a hazard, primarily from peeling paint. Lead dust is also a special concern in part because the smaller particles are more easily absorbed by the body. Certain methods of paint removal, such as sanding, scraping, and burning will create excessive amounts of dust if not controlled. LBP dust can also come from the normal abrasion of painted surfaces such as the opening and closing of windows. Because young children typically play on the floor and engage in a great deal of hand-to-mouth activity, they are at particularly high risk. Lead dust is also a problem with exterior paints. For many years exterior paint films were designed to "chalk" or lose some of the surface paint due to rain and ultraviolet light, in order to keep the surface looking fresh. The lead pigment that washed off in this process accumulates in the soil. Lead-contaminated soil poses a hazard to children who may play in or near it, and dirt tracked into a home can lead to increased lead dust levels in the home.

### **Regulation of Lead Use in Paint**

Federal regulatory efforts began with the enactment of the "Lead-Based Paint Poisoning Prevention Act" (LBPPA) (42 U.S.C. 4822 (d)(2)(a)) in 1971. In 1973, the Consumer Product Safety Commission (CPSC) established a minimum lead content in paint of 0.5 percent by weight in a dry film of paint newly applied. In 1978, CPSC lowered the allowable lead level in paint to 0.06 percent.

In 1973, amendments to the LBPPA designated the U.S. Department of Housing and Urban Development (HUD) as the lead agency in the Federal effort to eliminate the hazard of LBP. In the 1970s, HUD carried out an extensive research program with the National Bureau of Standards (now the National Institute of Standards and Technology). This work was followed in the early 1980s by the issuance of regulations addressing the hazards of LBP in HUD associated housing. The Housing and Community Development Act of 1987 changed the definition of the LBP hazard to include exterior as well as interior intact and non-intact painted surfaces. It also called for research and a

demonstration program, and mandated the inspection and abatement of all pre-1978 public housing family dwelling units. The Stewart B. McKinney Homeless Assistance Amendments Act of 1988 added additional requirements to the current HUD program. In response to the 1989 HUD-Independent Agencies Appropriations Act, comprehensive technical guidelines on testing, abatement, clean-up and disposal of LBP were developed. As directed by the 1990 HUD-Independent Agencies Appropriations Act, HUD issued the Guidelines on April 1, 1990. These Guidelines represented the first national compilation of technical protocols, practices, and procedures on testing, abatement, worker protection, clean-up, and disposal of LBP (HUD, 1990). Section 1017 of the 1992 Residential Lead-Based Paint Hazard Reduction Act provided guidance for the conduct of federally supported work involving risk assessments, inspections, interim controls, and abatement of LBP hazards (EIA, 1995). HUD is currently reviewing proposed revisions to the 1990 Guidelines.

The Environmental Protection Agency (EPA) has historically addressed lead in terms of its role as an environmental contaminant in water, soil, and air, and has regulated the disposal of hazardous and toxic materials which may include some LBP debris. Under a Memorandum of Understanding, EPA is assisting HUD in the current LBP research and demonstration program. In the September 2, 1994 Federal Register, EPA published a proposed model accreditation plan for LBP activities. Under Section 402 (a)(1) of Title IV of the Toxic Substances Control Act (TSCA), EPA is required to promulgate regulations to ensure, among other items, that contractors engaged in LBP activities are certified. The proposed rule, 40 CFR Part 475, includes provisions for training requirements for LBP inspectors, risk assessors, supervisors, abatement workers, and planner/project designers. As previously stated, the rule is in its proposed stages and has not been finalized.

Other agencies within the Federal government have participated in the issues of lead poisoning associated with LBP. ATSDR (under the Department of Health and Human Services [HHS]) published a major report to Congress in 1988, entitled, "The Nature and Extent of Lead Poisoning in Children in the United States: A Report to Congress." The National Institute of Occupational Safety and Health (NIOSH) is carrying out studies of worker protection methods in conjunction with HUD's demonstration program, and the Centers for Disease Control (CDC) developed Childhood Lead Poisoning Prevention Programs under its Bureau of Maternal and Child Health and Resources Department. Within the occupational environment, the Department of Labor's Occupational Safety

and Health Administration (OSHA) has developed permissible exposure limits (PELs) for workers to lead including workers within the construction sector, applicable to LBP abatement.

### **Regulatory Limits on Lead**

The following exposure limits for lead have been promulgated by the various agencies previously mentioned.

#### Paint

600 ppm - Consumer Product Safety Commission

1.0 mg/cm<sup>2</sup> or 5,000 ppm - HUD definition of lead-based paint requiring abatement

#### Dust

299 Mg/ft<sup>2</sup> - HUD clearance level for floors

500 Mg/ft<sup>2</sup> - HUD clearance level for interior window sills

800 Mg/ft<sup>2</sup> - HUD clearance level for window wells

#### Blood

10 Mg/dl - COC threshold for lead poisoning in children

30 Mg/dl - OSHA permissible blood lead level

50 Mg/dl - OSHA blood lead level requiring medical removal of worker

#### Soil

400 ppm - EPA draft soil screening guidance

#### Water

15 ppb (Mg/l) - EPA Maximum Contaminant Level (MCL)

Air

1.5 Mg/m<sup>3</sup> - EPA National Ambient Air Quality Standard

30 Mg/m<sup>3</sup> - OSHA Action Level (8 hour time-weighted average)

50 Mg/m<sup>3</sup> - OSHA Permissible Exposure Limit (PEL) (General Industry)

200 Mg/m<sup>3</sup> - OSHA Permissible Exposure Limit (Construction Industry)

Hazardous Waste

5 ppm - analyzed as "leachable" using Toxicity Characteristic Leaching Procedure (TCLP)

**APPENDIX G**  
**PERSONNEL CERTIFICATIONS**

STATE OF FLORIDA  
DEPARTMENT OF HEALTH AND REHABILITATIVE SERVICES

March 21, 1995

Brian C. Banks  
Spectrum Analytical Services, Inc.  
1468 Rosebay Court  
Marietta, GA 30066

Dear Mr. Banks:

With reference to your letter dated March 17, approval is granted for Spectrum Analytical Services, Inc. to conduct activities in the state of Florida under the reciprocal recognition of Georgia radioactive materials license number GA. 1199-1. This reciprocal recognition will expire March 21, 1996, unless prior notification has been received. Any planned entries into the state of Florida require written notification to this office at least three days in advance or, if time does not permit, authorization requested by telephone. Telephone approval must be followed by a written confirmation of your entry.

Your activities in the state of Florida must be conducted pursuant to Chapter 10D-91, "Control of Radiation Hazard Regulations," Florida Administrative Code (copy enclosed) and will be subject to inspection by this office. If you decide to establish a permanent office or site in Florida, a Florida radioactive materials license or x-ray registration will be required with the Office of Radiation Control. Be advised that each Florida highway weigh station is equipped with a radiation detector. Any problem with shipping papers or placards may result in punitive action.

While in the state of Florida, our 24 hour emergency number is (407) 297-2095. The telephone number for the state warning point to report any emergency is (904) 488-1320.

Thank you for your cooperation. If we can be of any assistance, please call us at (904) 487-2437.

Sincerely,

William A. Passetti  
Health Physicist Manager  
Radioactive Materials Section  
Office of Radiation Control

## RADIOACTIVE MATERIALS PROGRAM GEORGIA RADIOACTIVE MATERIAL LICENSE

Pursuant to the Georgia Radiation Control Act O.C.G.A. 31-13 (H.B. 947) 1990 and the Georgia Department of Natural Resources Rules and Regulations, designated Chapter 391-3-17, and in reliance on statements and representations hereto made by the licensee designated below, a license is hereby issued authorizing such licensee to transfer, receive, possess, and use the radioactive material(s) designated below; and to use such radioactive materials for the purpose(s) and at the place(s) designated below. This license is subject to all applicable rules and regulations of the Georgia Department of Natural Resources and orders of the Radioactive Materials Program, now or hereafter in effect, and to any condition specified below.

Page 1 of 3 Pages  
License Number GA. 1199-1  
Amendment Number .03

License (1. Name and 2. Address)

Spectrum Analytical Services, Inc.  
1468 Rosebay Court  
Marietta, Georgia 30066

3. In accordance with application dated January 28, 1991, GA. 1199-1 is amended in its entirety to read as follows:
4. Expiration Date: February 29, 1996
5. Telephone Number: (404) 591-8878

---

6. Radioactive Material (Element and Mass Number)	7. Chemical and/or Physical Form	8. Maximum quantity licensee may possess at any one time
A. Cobalt 57	A. Sealed Source (Dupont Model NER 472)	A. No single source to 40 millicuries
B. Cadmium 109	B. Sealed Source (Isotopes Products Model XFB Series Capsule 3205; NEN Model NER 467 Capsule LE66; Amersham Model CUC.D1; or North American Scientific Model IND 1602)	B. No single source to exceed 10 millicuries

### Authorized Use

- A. To be used in Scitec FA1C portable x-ray fluorescence device for lead in paint analysis.
- B. To be used in Niton XL Model 309 x-ray fluorescence device for lead in paint analysis.

**Georgia Department of Natural Resources**  
**Radioactive Materials License**  
**Supplementary Sheet**

Page 2 of 3 Pages  
License Number GA. 1199-1  
Amendment Number .03

**Condition**

10. Radioactive material may be stored at 1468 Rosebay Court, Marietta, Georgia. Radioactive material may be used only at temporary job sites of the licensee anywhere in the State of Georgia. This condition does not prohibit use in other Agreement States and States under the jurisdiction of the U.S. Nuclear Regulatory Commission under reciprocity procedures which may be established by an Agreement State or the U.S. Nuclear Regulatory Commission.
11. The licensee shall comply with the provisions of Georgia Department of Natural Resources Rule 391-3-17-.03, "Standards for Protection Against Radiation," and Rule 391-3-17-.07, "Notices, Instructions and Reports to Workers: Inspections."
12. In accordance with DNR Board Policy adopted May 27, 1992, the fees associated with this license fee category C.11, are:

Application fee	<u>\$500</u>	Renewal fee	<u>\$500</u>
Amendment fee	<u>\$380</u>	Routine Inspection fee	<u>\$1200</u>
Non-routine Inspection fee	<u>\$1200</u>	Annual fee	<u>\$500</u>

Checks for the fees should be made payable to the Department of Natural Resources, Radioactive Materials Program and mailed to the following address:

Radioactive Materials Fees  
P.O. Box 101161  
Atlanta, Georgia 30392

Mail license applications, amendment and renewal request the same day as the check to the following address:

Radioactive Materials Program  
4244 International Parkway, Suite 114  
Atlanta, Georgia 30354

Inspection fees are payable upon receipt of each invoice from the Department following inspections. annual fees are billed by the Department at the beginning of each fiscal year.

13. Radioactive material shall be used by, or under the supervision and in the physical presence of Brain C. Banks; Sam Banks; Nicholas P. Corish, III; or Craig V. Naliwajka.
14. The Radiation Safety Officers in this program shall be Brian C. Banks.
15. Sealed sources containing radioactive material shall not be opened or removed from their respective source holders by the licensee.

**Georgia Department of Natural Resources**  
**Radioactive Materials License**  
**Supplementary Sheet**

Page 3 of 3 Pages  
License Number GA. 1199-1  
Amendment Number .03

**Conditions (Continued)**

16. A. The licensee is authorized to collect wipe test samples on sealed sources possessed under this license using Scitec Corporation leak test kit and instructions or equivalent leak test kits.
- B. Analysis of test for leakage and/or contamination shall be performed by Scitec Corporation or by other persons specifically authorized by this Department, the U.S. Nuclear Regulatory Commission or an Agreement State to perform such services.
17. Maintenance or repair of portable devices involving removal of sealed sources from the devices or removal or dismantling of shielding may be performed by the device manufacturer, or by persons specifically authorized by the Department, Agreement States, or the U.S. Nuclear Regulatory Commission to perform such services.
18. The licensee may transport radioactive material or deliver radioactive material to a carrier for transport in accordance with the provisions of Rule 391-3-17-.06, "Transportation of radioactive Material, Amended."
19. The licensee shall conduct a physical inventory every six (6) months to account for all licensed material received and possessed under this license. The records of inventories shall be maintained for inspection by the Department and shall include the quantities and kinds of radioactive material, location of sealed sources, and the date of the inventory.
20. Except as specifically provided otherwise in this license, the licensee shall conduct its program in accordance with statements, representations, and procedures contained in the following:
- A. Application dated January 28, 1991, signed by Brian C. Banks, President.
- B. Additional information provided on February 6, 1991.

The Georgia Department of Natural Resources' regulations shall govern unless the statements, representations and procedures in the licensee's application and correspondence are more restrictive than the regulations.

## 1. INTRODUCTION

1.1 Environmental Hazards Services, Inc., (EHS) of Richmond, Virginia is an analytical testing laboratory specializing in the analysis of environmental and industrial hygiene samples, primarily the detection of asbestos in bulk samples (PLM), quantification of airborne fiber concentrations (PCM), detection of lead in various media (paint chips, wipes, air samples), and other parameters as needed. EHS provides its services to government, private, business and residential clients.

### 1.2 Purpose of EHS Quality Assurance/Quality Control (QA/QC) Manual

The QA/QC Manual documents the facilities, personnel, and procedures utilized by EHS to provide and maintain a reliable and consistently accurate system of analytical work. This QA/QC Manual provides working standards for personnel on all aspects of work conducted at this facility. It establishes QA/QC systems throughout the laboratory which allow the analytical system to be constantly monitored and indicates where adjustments or corrections may be necessary. It also permits the evaluation of EHS' performance and reliability by outside agencies.

### 1.3 Maintenance of EHS QA/QC Manual

This manual is reviewed at least annually by the Laboratory Director and/or Quality Assurance/Quality Control Coordinator. It is revised as necessary to reflect any changes in the laboratory's practices. All revisions/reviews are documented in the Revisions/Review log found at the beginning of the QA/QC Manual. Additionally, all personnel review the QA/QC Manual at least annually. This review is noted in the Employee Review log located at the end of the manual. The QA/QC Manual is maintained in the Laboratory Technical Library. It is available at all times to EHS personnel and evaluating agencies.

## 2. FACILITIES

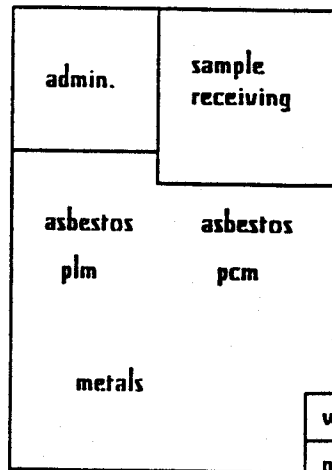

### 2.1 Location

EHS is located at 7469 White Pine Road, Richmond, Virginia, 23237. All necessary utilities are available at this location for the safe and reliable operation of an analytical testing laboratory. EHS has occupied its present location since December 1994. Facilities can be renovated or expanded as future needs dictate.

Approximately 906 square feet (sq. ft.) are dedicated to laboratory services and 420 sq. ft. for office/administrative purposes. The laboratory portion of the facility is broken down as follows: 424 sq. ft. for asbestos analysis by PLM/PCM, and 482 sq. ft. for metals analysis.

Every effort has been made to ensure the safety of EHS personnel and other occupants of the building.

### 2.2 Floor plan

### **3. PERSONNEL/ORGANIZATION/RESPONSIBILITIES/QUALIFICATIONS**

#### **3.1 General Manager**

The General Manager is ultimately responsible for all aspects of Environmental Hazards Services, Inc. He/She is responsible to the Board of Directors.

#### **3.2 Laboratory Director**

3.2.2 The Laboratory Director's responsibilities include, but are not limited to:

- a. Review of all laboratory procedures.
- b. Review of any change in laboratory procedure.
- c. Employee training (Safety, new procedures, etc.).
- d. Review of all laboratory reports.
- e. Review of all QA/QC activities.
- f. Review of all laboratory manuals (Safety, QA/QC, Procedure).
- g. Insure all accreditations and licensing requirements are up-to-date.
- h. Approval of new analysts prior to their reporting results for clients.
- i. Any other activity as needed.

3.2.3 The Laboratory Director must meet at least the minimum of the following requirements:

- a. B.A. or B.S. in Science
- b. Five (5) years experience in an industrial hygiene/environmental laboratory.

#### **3.3 Quality Assurance/Quality Control (QA/QC) Coordinator**

3.3.1 The QA/QC Coordinator's responsibilities include, but are not limited to:

- a. An annual review of the laboratory's Quality Assurance/Quality Control Manual.
- b. Review and implementation of newly required method changes.
- c. Review and reporting of proficiency samples.
- d. Review and reporting of all round robin samples.
- e. Determination of intra-laboratory precision/accuracy
- f. Deficiency corrections.

3.3.2 The QA/QC Coordinator must meet at least the minimum of the following requirements:

- a. B.A. of B.S. in Science or Mathematics
- b. Three (3) years laboratory experience.

#### **3.4 Asbestos Bulk Analyst**

3.4.1 The asbestos bulk analyst's responsibilities include, but are not limited to:

- a. Analysis of bulk samples by Polarized Light Microscopy utilizing proper methodology.

- b. Following proper QA/QC methods as described within this manual.

3.4.2 The asbestos bulk analyst must meet at least the minimum of the following requirements:

- a. Training by the McCrone Institute "Microscopical Identification of Asbestos" or equivalent.
- b. Six months experience analyzing asbestos bulk samples.
- c. Exhibit competency at this type of analysis. (See S.O.P. for EHS Bulk Asbestos (PLM) Analyst Training)

3.5 Fiber Count Analyst

3.5.1 The fiber count analyst's responsibilities include, but are not limited to:

- a. Analysis of air samples by Phase Contrast Microscopy utilizing the NIOSH 7400 Method.
- b. Following proper QA/QC methods as described within this manual.

3.5.2 The fiber count analyst must meet at least the minimum of the following requirements.

- a. NIOSH 582 (Sampling and Evaluating Airborne Asbestos Dust) course or equivalent training.
- b. Exhibit competency at this type of analysis (See S.O.P. for Fiber Count Analyst Training).

3.6 Metals Analyst

3.6.1 The metals analyst's responsibilities include, but are not limited to:

- a. Maintenance of all equipment within the metals laboratory.
- b. Preparation/analysis of metals samples utilizing Atomic Absorption technology.
- c. Follow proper QA/QC methods as described within the QA/QC Manual.

3.6.2 The metals analysts must meet at least the minimum of the following requirements.

- a. B.S. or B.A. in Science
- b. Six months experience at this type of analysis.
- c. Exhibit competency (See S.O.P. for Metals Analyst Training).

numbers are assigned by analysts within the specific department. For example, the first sample of the job number used above would be assigned EHS number 11-94-0123-1.

4.3.3 As analysis is conducted, the analysts record results on raw data work sheets. (See individual sample analysis S.O.P. for further information.)

4.3.4 Samples are maintained on-site for thirty days after analysis. They are then either disposed of in accordance with all regulations or returned to the client. EHS contracts with a local contractor for hazardous waste disposal.

#### 4.4 Reviews

4.4.1 Raw data work sheets are double checked by the analyst for completeness and submitted to administration for reporting.

4.4.2 QA/QC samples are completed and reviewed by the QA/QC Coordinator or Laboratory Director prior to reporting of results to clients. (See individual analyte S.O.P. for QA/QC Requirements.)

#### 4.5 Document Control

Reports are reviewed by an analyst for completeness and signed prior to release. A copy of the report, raw data worksheets, and chain-of-custody are kept in the client file. These files are located within file cabinets at the laboratory. These files are permanently maintained on-site.

## 5. QUALITY ASSURANCE/QUALITY CONTROL

### 5.1 Internal Quality Control (QC)

#### 5.1.1 Asbestos Bulk Samples

##### 5.1.1.1 Intra-Laboratory Asbestos Bulk Sample QC

At least ten percent (10%) of all asbestos bulk samples analyzed at EHS are reanalyzed as part of a daily QC Program. The reanalyses are performed "blind" (the QC analyst is unaware of the initial result) and may be duplicate or replicate analysis (by the original analyst or a different analysis).

##### 5.1.1.2 Inter-Laboratory Asbestos Bulk Sample QC

EHS maintains a bank of bulk samples generated by regulatory programs (NVLAP, ELAP, etc.) and other laboratories. At least one of these samples is analyzed by an EHS analyst daily. This functions as a measure of EHS's accuracy and ensures continued precision of the individual analyst.

##### 5.1.1.3 Recordkeeping

All documents regarding internal QC of Asbestos bulk samples are maintained in a monthly QC file. Summaries for individual analysts are compiled and overall precision and accuracy are determined.

5.1.1.4 See S.O.P. for Asbestos Bulk Asbestos QA/QC Program for additional information.

#### 5.1.2 Airborne Fiber Counts

##### 5.1.2.1 Intra-Laboratory QC

At least ten percent (10%) of all samples analyzed at EHS are reanalyzed as part of a daily QC program. The reanalyses are performed "blind" (the QC analyst is unaware of the initial result) and may be a duplicate or replicate analysis (by the original analyst or a different analysis).

##### 5.1.2.2 Inter-Laboratory QC

EHS maintains a bank of air samples generated by regulatory programs (PAT, etc.) and other laboratories. At least one of these samples is analyzed by an EHS analyst daily. This functions as a measure of EHS's accuracy and ensures continued precision of the individual analyst.

##### 5.1.2.3 Recordkeeping

All documents regarding internal QC of Airborne Fiber Counts are maintained in a monthly QC file. Summaries for individual analysts are compiled and overall precision and accuracy are determined.

5.1.2.4 See S.O.P. for Airborne Fiber Count QA/QC Program for additional information.

### **5.1.3 Metals**

#### **5.1.3.1 Intra-Laboratory QC**

EHS ensures accuracy and precision of metals analysis through the use of calibration verifications, laboratory control samples, spiked matrix and blank samples, duplicate analyses, and the comparison of the generated QC data with specific information regarding individual QC procedures.

**5.1.3.2** See S.O.P for Metals QA/QC for additional information.

### **5.2 External QC**

#### **5.2.1 Round Robin**

EHS participates in Round Robin sample exchanges for each analysis it performs. Sample exchanges usually occur on a quarterly basis and include the participation of several other laboratories of a reputable and consistent nature. Records of all round robin activities are maintained in files specific to each analysis.

#### **5.2.2 Proficiency**

EHS is a participant in the following External Proficiency Programs:

##### **5.2.2.1 Airborne Fiber Counts**

NIOSH/AIHA Proficiency Analytical Testing Program (PAT), Quarterly

##### **5.2.2.2 Asbestos Bulk Samples**

National Voluntary Laboratory Accreditation Program (NVLAP), Semi-annually

##### **5.2.2.3 Metals**

NIOSH/AIHA PAT Program, 3 Metals, Quarterly

AIHA Environmental Lead Proficiency Testing Program (ELPAT), Lead samples in differing matrices, Quarterly

**5.2.3** All materials pertinent to EHS' participation in proficiency testing are maintained for future reference and training purposes. All records are maintained in specific files.

## 6. EQUIPMENT /MATERIALS/METHODS

### 6.1 Phase Contrast Microscopy

#### 6.1.1 PCM Equipment List

6.1.1.1 Nikon Alphaphot-2 VS2

6.1.1.2 SKC Acetone Vaporizer

#### 6.1.2 PCM Analytical Method NIOSH 7400, Revision 3

#### 6.1.3 PCM Calibration & Maintenance Policy

6.1.3.1 Daily calibration and other periodic checks are required to ensure proper functioning. See "S. O. P. for Phase Contrast Microscope Alignment/Calibration" for all requirements.

### 6.2 Polarized Light Microscopy

#### 6.2.1 Polarized Light Microscope Equipment List

6.2.1.1 Olympus BH-2 Polarized Light Microscope with accessories

6.2.1.2 NUAIRE Class II, Type A/B3 Biohazard negative pressure hood

6.2.1.3 Thermolyne Nuova II Hot Plate

6.2.1.4 Meiji EMT Stereomicroscope

#### 6.2.2 Polarized Light Microscopy (PLM) Analytical Method E.P.A. Method 600/R-93/116

#### 6.2.3 Polarized Light Microscopy (PLM) Calibration and Maintenance Policy

6.2.3.1 Daily calibration and other periodic checks are required to ensure proper functioning. See "S. O. P. for Polarized Light Microscope Alignment/Calibration" and "SOP for Calibration of Refractive Index Liquids" for requirements.

### 6.3 Metals/Inorganics

#### 6.3.1 Equipment

6.3.1.1 Perkin Elmer 3100 Flame Atomic Absorption Spectrophotometer/5100 Software

6.3.1.2 Ohaus E120 Balance

6.3.1.3 NIST Certified Brass Calibration Weights

6.3.1.4 Hamilton Vectaire Fume Hood

6.3.1.5 Thermolyne Nuova II Hot Plate

6.3.1.6 Eppendorf 4710 adjustable pipettes

6.3.1.7 Class A Volumetric Glassware

### **6.3.2 Metals/Inorganics Methods**

**6.3.2.1 NIOSH 7082 (Lead in Paint Chips, Wipes, Air Samples)**

**6.3.2.2 NIOSH 7048-M (Cadmium in air)**

**6.3.2.3 NIOSH 7024-M (Chromium in air)**

**6.3.2.4 NIOSH 7030-M (Zinc in air)**

### **6.3.3 Calibration and Maintenance**

**6.3.3.1 Daily calibration and other periodic checks are required to ensure proper functioning. See "S.O.P. for Metals Equipment Calibration" for requirements.**
