To whom it may concern:

PROTECTION OF ARSP HEAVY DUTY STOCK POT RANGES

ARSP-18 stock pot range protection will be performed with one 93482 nozzle (one flow point nozzle) per single head, the nozzle will be aimed to center of the stock pot range head above its center

The nozzle height of installation should be 27" - 47 " above the range head, and the distance will be measured from the surface of the stock pot to the tip of the nozzle.
