

OVEN CLEANER

SUPPLIES

water
spray bottle
baking soda

a rag
vinegar
small bowl

PROCEDURE

The Oven:
Remove oven racks.

Mix couple spoons of baking soda with some water in a bowl. Mix it into a paste that's easily spreadable on the surfaces that need cleaning.

Spread the paste on the inside of the oven. It will need to sit at least 12 hours or overnight so the baking soda will turn brown.

The next day take a wet rag and wipe out as much of the baking soda as possible.

Put some vinegar in a spray bottle and spritz it on spots where there is still baking soda residue. Then wipe with a wet rag.

Put racks back in oven and turn on a low temperature for 15-20 minutes to let it all dry.

The Window:
Mix baking soda and some water to get a thick paste.

Apply the paste on the window.

Let sit for 30 minutes.

Use a rag to wipe the window down.
