

## “Just Enough” Strategy

We specialize in tailored programs based on your industry and specific market. Our professional analysts will review your details and provide you with a preliminary plan at no cost.

## THE INDUSTRIES WE SERVICE

### Healthcare – Patient Data Protection

In today's healthcare environment, providers are challenged with the security of both patient data and the medical devices used in the course of monitoring or providing treatment. Our healthcare services will diagnose and provide specific treatment plans to ensure your patients' identifiable information (PII) is protected in compliance with the mandated HIPPA governance standards.

### Education – Cyber Security in the Classroom

Public and private educational institutions are under increased risk from the threat of ransomware and other data mining attacks. HFE CS will work with your IT team to develop and implement a safe and secure environment for your administrative, teacher, student, classroom data and intellectual property. With IT salaries soaring in response to the increased threat profile within the Education sector, many are finding that a proxy service to plan, implement and monitor your technology needs not only saves on overall IT expenditure but also ensures a level of participation and expertise far below the market value cost of adding dedicated IT resources.

### Manufacturing/Retail – Safe and Secure Systems

Manufacturing firms are among the world's most exploited. Industry analysts predict the loss of assets and revenue due to intrusion could be as high as \$100 billion per year when coupled with espionage and data leakage. Our mission at HFE CS is to help your firm understand and analyze threats and vulnerabilities, determine the best course of action based on business analytics and, ultimately, use 'dollars and sense' reasoning to deploy effective, efficient risk strategies that align closely with business goals.

### Special Projects – Paying it Forward

At HFE CS we are dedicated to improving and helping our community. We accept Special Projects that meet criteria for nonprofit or other community-based initiatives where IT Project Management might be out of reach due to budget constraints. If you represent this client segment please contact us today to discuss your needs. No project or concern is too small.
