

ThreatEvader®

ThreatEvader® is the HFE CS proprietary Security Operations Center (SOC) offering designed for small businesses. We understand that IT dollars are in tight demand, so we have designed a multi-tiered offering to help optimize your budget while protecting your company and employee assets. From domain level monitoring to IT system configuration management and real-time event handling, ThreatEvader® provides your management and IT staff with the tools needed to secure your work environments. HFE CS will help coordinate your IT Incident Management response but, more importantly, we will use your day-to-day email and network traffic data to continuously modify your systems configurations, adapting your frontline defenses to prevent incidents from happening. We work on your safety so your IT department can focus on your business.

Our dedicated Security Operations Center offering includes:

- + Domain level email monitoring and data analytics designed to protect your brand IP.
- + Cofense email server monitoring and data analytics using advanced AI and machine learning programs to reduce the number of potential exploits in your email environment.
- + Phish Alert Button (PAB) access for your employees to safely call-out potential threats including spam, phishing attempts and any other identified risks.
- + Security Operations Center (SOC) staff to interface with your employees, delivering recommendations, answering questions, and providing advice in real-time.

Discover

We continually monitor your email environment looking for trends in threats and vulnerabilities.

Awareness

We provide real-time monitoring to identify pervasive threats in your computing environment.

Training

We work with your employees' security awareness training program as they turn their newfound knowledge into practice.

Action

We remediate existing threats in your IT environment while scanning for changing trends, reacting to new challenges within days, not weeks or months.

About US

Based near Winston-Salem, NC we primarily service Virginia and the Carolinas, providing personalized service giving our clients the peace-of-mind associated with true data security.
