

HumanWall® Awareness Training

Employees are our greatest asset and largest potential liability. In 2019, 78% of Business Email Compromise (BEC) occurred via email attacks designed to trick human resources into unsafe actions. Credential Theft, Ransomware, Malware Injection and Social Engineering attacks were used to compromise business systems to the tune of over \$2 billion dollars for small businesses alone.

HFE CS, LLC recognizes the limitations of physical layer IT defenses. While we work with your existing IT staff to optimize the configuration of your physical layer defenses, we also understand that the likelihood of an attack directly correlates to the number of opportunities presented to your employees. Our holistic program reduces the overall number of fraudulent emails in your employees' inboxes, greatly reducing the likelihood of a mistake. You must be right all the time, but the bad actors only must be right once.

Our award-winning Security Awareness Training includes:

- + Simulated email, text, voicemail, and USB security tests designed to mimic real-world exploits.
- + On-demand, online training for your employees, targeted to their test results.
- + Live instructor led training four times per year designed to introduce and reinforce your IT policy campaigns and promote employee 'ownership' of company assets.
- + Targeted instruction designed to teach clean computing environments, secure password usage, safe document handling and overall business asset protection.
- + In-depth reporting and analytics to demonstrate the efficacy of your security spend.

Discover

We test your employees to identify their training needs.

Awareness

We work with your employees to teach them how to identify threats.

Training

We train your employees how to secure their assets, recognize threats and react to attacks.

Action

We work with your employees to neutralize phishing and other direct exploit attempts.
