

Attack Resiliency Planning

Attack Resiliency Planning is the HFE CS offering designed to build fast, effective, and tailored Business Continuation (BCP) and Disaster Recovery (BCP) plans to address how your business will respond to a production impacting IT event. Our staff of certified and experienced project managers will work with your leadership team to develop scenario-based plans designed to direct responses to events, reduce loss due to data breach or system downtime and coordinate employee actions to minimize overall financial impacts. Industry analysis of event response tells us that well-constructed, practiced BCP and DR plans can reduce business loss by over 80% in the case of an event.

Our dedicated Security Operations Center offering includes:

- + Creation of master-level BCP and DR plans that include system maps, asset inventories, communication protocols and management hierarchies.
- + Development of scenario-based action plans designed to address the most likely event types based on your market and industry analytics.
- + Live tabletop exercises to identify, test and practice the plans we develop with your management and IT staff.
- + On-going project management revisions and plan management activities to ensure plans are updated with changing business requirements.

Discover

We use your business analytics to determine the best course of action as we help develop and plan your event response.

Awareness

We help your management team build an awareness of the steps required to survive a serious disaster event.

Training

We test plans based on tabletop exercises to identify weaknesses, refine responses, and ensure roles and responsibilities are communicated and understood.

Action

We work with your team in the case of an event to help coordinate response activities.

About US

Based near Winston-Salem, NC we primarily service Virginia and the Carolinas, providing personalized service giving our clients the peace-of-mind associated with true data security.
