

Lawn Care Step by Step

April:

Repair damaged areas with a Lawn Repair Kit or Patch. Apply Crabgrass Preventer to established lawns, to stop crabgrass seed from germinating apply before temps reach 55 , 3 days in a row.

May:

Seed lawns can't do if Crabgrass preventer was applied in April. or lay sod. Fertilize established lawns with NO Phosphate lawn food (Weed & Feed). Begin mowing not lower than 2 1/2

June:

Apply Weed & Feed to established lawns with No Phosphate, if not done in May. Mow regulary.

July:

Only irrigated and highly managed lawns can be fertilized this month. Keep mowing. A lawn needs 1" of water per week. Irrigate if no rainfall.

August:

Plant seed or lay sod from mid to late August. Repair bare areas with Lawn Repair Kit or Patch. Irrigate if no rainfall.

September:

Early to mid September you can still lay sod or seed new lawns. Fertilizer and use a weed killer to get rid of perennial weeds.

October:

Apply winterizer or high nitrogen, phosphorus free fertilizer. This is the most important fertlizing application for your lawn.
