Planting Guidelines

Dig a hole one and half times as wider than the container

Follow the instruction on back of Bio-tone bag to help stimulate the roots

Place the nessisary amount in the hole before planting

Remove container. Roughen sides, bottom and top of the rootball

Place tree in the hole with the trunk straight

Fill soil around the areas needed

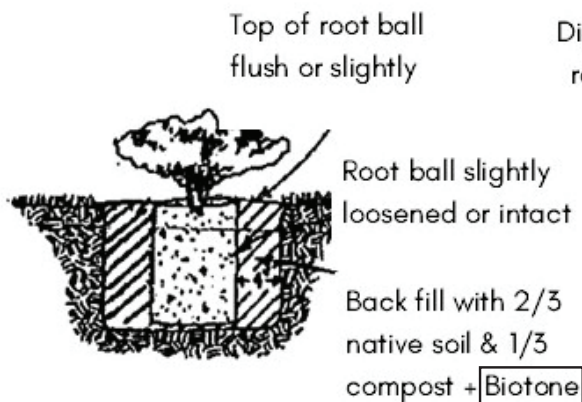

Water throughly

Add 3 inches of mulch around the tree, but not close to the trunk

Water as needed to maintain evenly moist soil

staking is beneficial for larger trees or windy sites. Remove after 1 year

SHRUB PLANTING

TREE PLANTING
