

Risk Adjustment

Consider every visit an opportunity to document and report the full burden of illness.

Risk Adjustment predicts the variations in resources that are required to care for diverse patient populations leading to appropriate reimbursement based on those variations.

Patient Outcomes

- Accurately represents burden of illness.
- Helps improve clinical care, and disease management.
- Identifies distinct needs with better outcomes through appropriate management of the patient.

Provider's Impact

- Risk Adjustment payment relies on accurate diagnosis coding on claims and complete medical record documentation.
- Accurate allocation of patient care resources
