

Sam-i Sterilization Robot

ROBOTECH
CARIBBEAN LLC

UVC Technology

Sam-i uses germicidal ultraviolet light to **disinfect 99.99999%** of microorganisms from surfaces and air including Covid19. There are NO known pathogens capable of resisting UVC light exposure.

Autonomous Robot

Sam-i is an independent robot that operates in a fully autonomous way, thus preventing staff exposure to Covid19 and harmful chemicals. The robot charges itself and continues operating seamlessly around the clock.

Safety

Sam-i is equipped with ultrasonic and air collision sensors in order to effectively avoid obstacles. She's also able to shut off UVC surface disinfection completely if it senses people in the area.
