

Preparing your Luminaria Bag

Assembly all supplies:

Paper bags

Candles

Aluminum foil

LumaBase

Cardboard Bag Bottom

Water

Isopropyl alcohol

Prepare LumaBase

Remove blue plug. Partially fill with water. (There needs to be enough room for water to expand in freezing temperatures.)

Add a few teaspoons of Isopropyl alcohol. This will help ensure the water doesn't freeze.

Secure Blue Plug back in place.

Wrap LumaBase as shown, or the bottom of the candle, with aluminum foil. This will make removing the candle drippings easier the next day.

Remember to pull wick upright before placing in hole of LumaBase for easier lighting.

Prepare Bag for best results

Before opening bag, fold top down 1 inch twice and crease. Now slightly open the bag and create collar by carefully folding down twice. Smooth out top edging of bag. Open

Final Steps

Place cardboard bag bottom into bag

Next place prepared LumaBase

Carefully add candle into slot on LumaBase.
