

BeyondPerformance

Direct Connect BYOD

Secure & On-Demand

Deliver standard Infor Lawson functionality through any browser or mobile device for any Infor Lawson Portal or SS application with double authentication and security.

Rules Based

Rules based engine delivers the flexibility to customize the access of any form targeted to any group of people.

VPN Not Required

Eliminate the cost, hassle, and risk of traditional persistent VPN's (however, Direct Connect can run side-by-side with your current VPN technology).

Secure access on any device for self-service applications...

You want to roll out your Benefits Enrollment program and you want to make it available outside of your corporate office. Make no mistake about it, Benefits Enrollment is often a family oriented activity discussed by the heads of a household. The decisions that are made will affect the entire family. That's why many organizations make this a self-service function, while also making it available to employees in the comfort of their own home where they will have the input of others who will help make the decisions.

BeyondPerformance

Direct Connect BYOD

You need secure access to specific Infor Lawson functions available on any browser.

Direct Connect is a unique rules-based solution that is designed specifically for your Infor Lawson implementation and can deliver functionality like Benefits Enrollment securely and on any device including virtually any browser or mobile device such as tablets and phones. Finally, a solution that helps you realize the full benefit of ESS and MSS (Employee & Manager Self- Service) securely and on any device.

- Secure, on-demand access to employees and vendors.
- Without the cost, hassle, and risk of a persistent VPN connection.
- Perfect for securely bursting dedicated sources of information to your users outside your corporate network.
- Single-user account and password

BYOD

 WE BRING THE SECURITY

Direct Connect Business Benefits

Overview

Whether it's increased security, thanks to Direct Connect's lightning fast, double-authentication, or a need for greater LDAP flexibility, iTK's Direct Connect is the secure, go-to resource for more companies than ever.

- Access to employees and without the cost, hassle and risk of persistent VPN connection.
- Perfect for securely bursting dedicated sources of information to your users outside your corporate network
- Single-user account and password

Access to multiple LDAP and NON-LDAP data stores

- Access points to multiple-user credential storage.
- Single application for seamless access to data, in real-time.
- Multi-point user credential storage expands your authentication options.
- Full ESS and MSS access results in HR savings of 75% or more, according to Infor Lawson.
- Will not pollute your core user credential repository with unnecessary or risky data.

Tighter security DMZ deployment and configuration

- Manage external and internal access by user or a group of users.
- Same user account and password for regular daily application access.
- Offers scaled down information for logins outside of network.
- Control options available in our rules-based engine options (restrict data and access based on: time-of-day, pin authentication, IP range, geographic location, etc.)
