

## Wireless Access Point (WAP) upgrades

The Division of Administration, through a partnership with the Division of Information Technology have started a project to increase the WiFi connectivity through the D4 District Office. Currently we have a total of 34 Wireless Access Points (WAP) installed amongst the 15 floors. There are an average of three WAPs on each floor. With the commitment to innovation in District 04, we will drastically improve the WiFi capabilities throughout every floor in the building. We have purchased 48 additional WAPs that will bring our total to 82 for the building.

With the Wireless Access Point (WAP) upgrades, D4 will immediately see an increase in connectivity as well as productivity throughout the entire building. Regardless of your location in the District Office, you will be able to reliably connect to WiFi with your laptop and/or cellphone. We will see an increase from 34 WAPs to 82 when all are installed. We'll have an increase on average to approximately 8 WAPs per floor.

As we encourage all staff to connect directly to the network, you now have the option to connect Local Area Network (LAN) or wirelessly.

We will continue to provide updates on the status of the implementation.
