

Advanced Skin Cancer Screenings (ASCS) are performed by a professional Dermographer who has been trained to recognize and capture images of suspicious spots and lesions that may need further evaluation by a physician. Your provider has marked the areas that they want imaged with an “X” and we would encourage you to mark any additional spots that you want imaged with an “O”. The Dermographer will mark a check for all imaged spots. **Full Body Imaging (FBI)** will be captured as part of your ASCS. FBI can be provided as a standalone service for a reduced fee, but will not include the analysis or report of an ASCS. The FBI augments your medical record.

The Day of the Screening:

Please come to your appointment with loose fitting clothing and wearing undergarments. Please come *freshly bathed/showered, no make-up, lotions, body sprays or perfumes*. If you want your nails checked, please remove any nail polish. This is all necessary to obtain the highest quality images.

In a private room, you will be asked to provide specific information on your health history. This will become a part of your secure HIPAA compliant record that you access via a cellphone/tablet application on your iOS or Android device. We want you to share all of this with your healthcare providers and we will provide them with FREE access to the Intelligent Dermatology workstation so that they can use the powerful A.I. tools. Please help us get your provider connected to DermEngine so that they can perform the “Double-Check” that may avoid an unnecessary surgical biopsy by looking for changes over time.

You will be asked to perform the standard poses necessary to complete the FBI. This visit will take approximately 15-20 minutes and your report will be color-coded in less than 72 hours. When you receive the email with the link to your phone/tablet app, follow the instructions and create your password. We encourage the use of the “Two-stage authentication” for maximum security with the patient portal.

Our ASCS are provided in partnership with OHSU’s department of dermatology. The board-certified dermatology providers that will be analyzing your images have world-class expertise in the diagnosis and treatment of skin cancers. As a participant your redacted images will be used to improve the A.I. even more.

Thank you for taking charge of the largest organ in your body (skin).

Be sure to ask your employer about sponsoring the ASCS as a valuable benefit to all their employees.
