Managed Cloud Services

The security and privacy of a private network, with the economy of a shared infrastructure.

What is Cloud Computing?

The term "cloud computing" is widely used to describe a number of computing solutions designed to offer the ability to securely protect your business data.

Cloud Computing eliminates hardware limitations (infrastructure management made easy), increases productivity (work from anywhere) and securely stores your most valuable asset (protect your data).

Benefits of Cloud Computing

* Ease of Use
* Increased Productivity (work from anywhere)
* Secure Infrastructure (Compute & Storage)
* Scalability, Reliability and Flexibility
* Predictable Expenses

Making IT Easy for You

For some businesses, moving to the Cloud can invoke uncertainty. Perhaps a perceived lack of "ownership" or the myth that Cloud isn't secure may keep them from embracing its full potential.

Priorpoint helps clarify and dispel any uncertainties by building highly secure cloud environments that give you as much or as little ownership you want.

Access is secured and encrypted providing peace of mind while enjoying flexible access options, and your cloud is "always on" so you can stay focused on your business—and the best part, cost effectively.

Priorpoint offers a full suite of managed cloud computing solutions and our team of experts are ready to work with you to design and implement a seamless and secure solution specific to your business needs.

"We listen, we understand, we respond, we partner – we work for you."

-Jason Casey, CEO Priorpoint

Managed Cloud Services

Simplify your business operations with minimal investment.

One thing all cloud computing solutions have in common is the need to ensure privacy and data security. We offer services that give you the security and privacy of a private network, with the economy of a shared infrastructure.

Infrastructure as a Service (IaaS)

"Infrastructure management made easy!"

Maintaining, supporting, and replacing on-premises servers is a costly endeavor. Secure and always available cloud computing services makes server management easy, scalable and the expense predictable.

Desktop as a Service (DaaS)

"Work from Anywhere"

In today's world, the ability to work away from the office is a necessity. We provide secure access to your files and applications anywhere you need to work.

Backup as a Service (Baas) & Disaster Recovery as a Service (DRaaS)

"Protect your data"

Your business data is one of your most valuable assets. We'll protect it from human error, ransomware or Acts of God. Storing data in the cloud increases security by eliminating theft, loss, or destruction of your data.
