

Freelance IoT Engineering Consultant

At Unitron Connect, we believe in the increasing importance of digitization. That is why we develop purpose-built IoT solutions in the fields of smart recycling, smart logistics and smart infrastructure.

Unitron Connect is part of the UnitronGroup, a R&D and electronics manufacturer active in wireless communication. Over the past 30 years, our family business has grown into an international company with 120 employees and offices in Belgium, the Czech Republic, the United States and China. Because we currently have an increasing number of IoT projects, we are looking for an **Freelance IoT Engineering Consultant**.

Function:

Together with the R&D team you are responsible for research, design and development of new products, through research and simulations. You are responsible for the validation of your designs by means of testing in collaboration with the test lab and our design engineers. In collaboration with our software engineers developing the embedded software, you ensure a high quality solution.

Profile:

- You have a master's degree in electronics and you are passionate about IoT (at least 7 years of experience).
- You have knowledge of digital and analog circuits, embedded and application software and IoT communication protocols.
- Experience in research projects and in collaboration with universities and knowledge institutes can be a plus.
- You also have experience converting a concept into a market ready solution
- Preferably, you have some affinity with construction or materials research.
- You write and speak fluent Dutch and English.

Offer:

- You preferably work on a freelance basis and you are available over a period of three months (minimum).
- Depending on the results, we can work on a structural collaboration.
- UnitronGroup is a value-driven company where work-life balance, sustainability and team atmosphere are no empty concepts.
