View & Download Media

Step 1

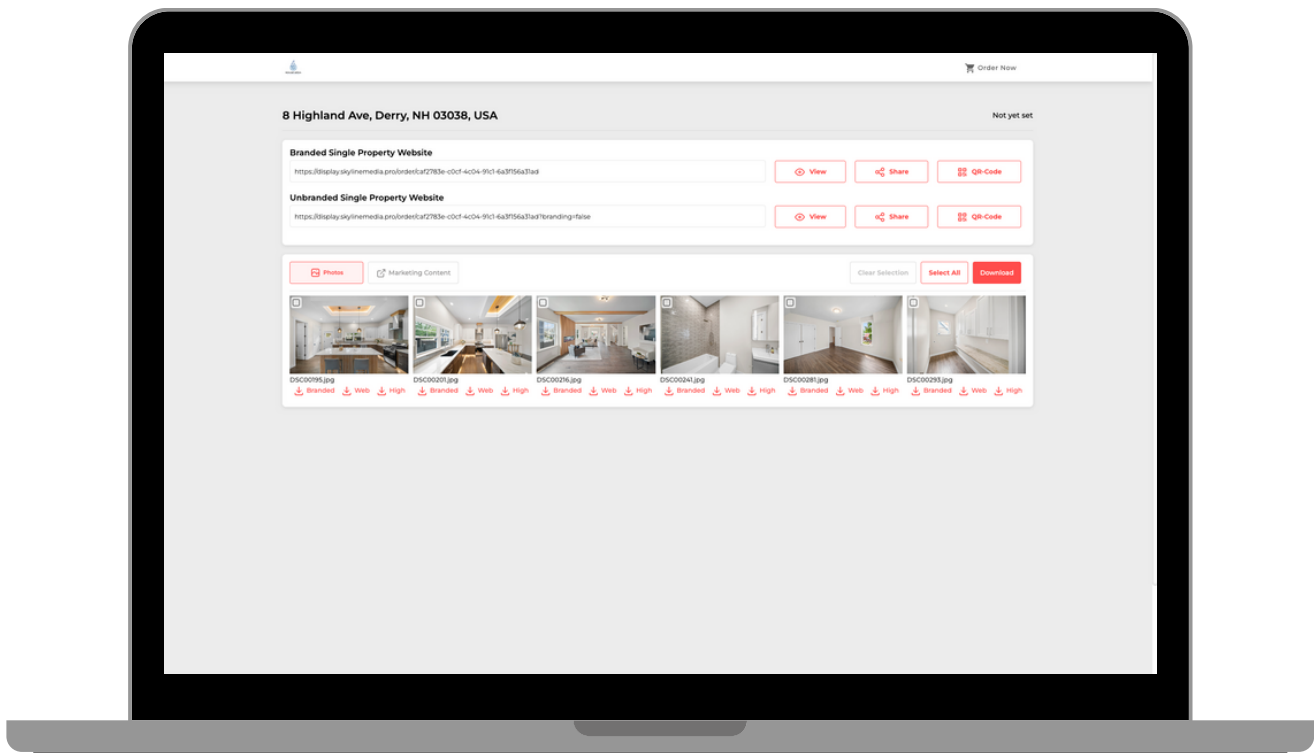

Upon finishing the editing process, all media captured during your shoot will be posted on a specialized delivery listing website portal. This platform serves as a centralized hub for you to access and review content related to your listing. Additionally, it functions as a standalone property website that you can easily share.

Within 24 hours of the completed shoot, you will receive an automated email informing you that all media has been edited and placed into the single listing website portal, and is now available for viewing and downloading.

On the email, click “View and Download Your Media”

Note: The actual email you receive may differ depending on how the order was placed and the packages you selected during ordering, but regardless of what email you receive, the process is relatively the same.

Step 2

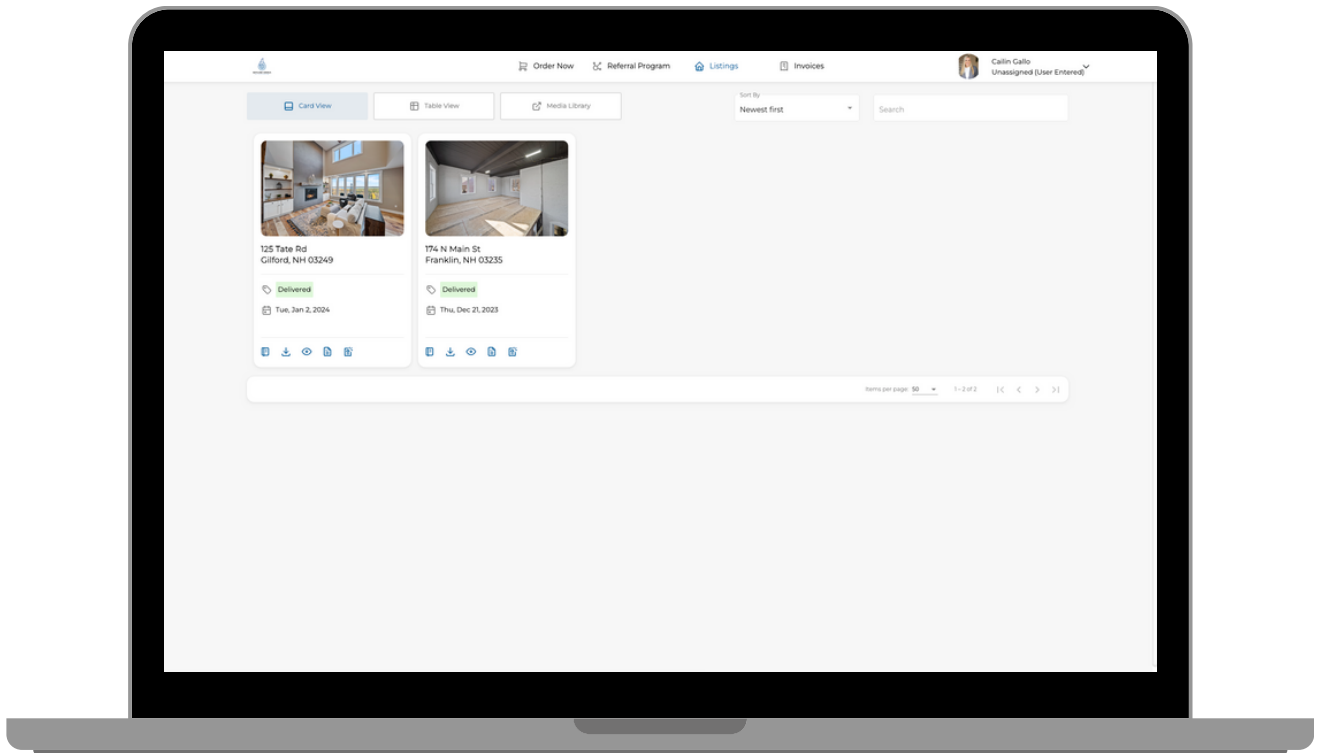

Clicking “View and Download Your Media” will bring you into the portal/hub, specific for the listing.

Upon visiting the central hub of the single listing website, you can preview watermarked images, videos, floor plans, and other content related to the listing. However, the download feature will be enabled only after the invoice has been settled in full.

To make the payment, just follow the onscreen prompts for quick online payment.

Once paid, all media is now available for download. You will also have full access to our property website editor, social media marketing tools and more!

Option

Alternatively, you can log in to your portal by visiting our website and selecting "book now" from the navigation menu. Once logged in, you will have complete access to all of your orders, both pending and completed, serving as a central hub for all orders placed with Skyline Media.

Select the tile associated with the listing to navigate the property website, make modifications, download media, and access additional features.

If you have any questions regarding how to view and download your media, please email us at hello@skylinemedia.pro and we will be glad to assist you.
