

Drug & Health Services

Urine, Hair & Oral Fluid Testing

Our urine drug testing includes a vast nationwide network of collection sites and supports extensive panel options, including DOT urine testing. Hair testing can uncover habitual drug use that might not be apparent through urine or blood tests. Pre-employment drug screening using hair provides insight into a longer window of detection. Spot checks for illegal drugs involving oral fluid tests can save lives. We schedule reputable partner providers to come directly to your premises to administer oral fluid tests to your staff.

Health Services Solutions

Quickly schedule the full scope of pre-employment health screenings for your new hires. Through our provider network, we offer fully-compliant health testing that applies to your industry, such as physicals, tuberculosis testing, nicotine testing, alcohol screening, titers, chest X-ray, vaccinations, audiograms, vision, and respiratory testing.

DOT Drug Testing

Make sure your drivers are never impaired on the road. Perform a standard DOT-approved drug test and/or random, post-accident or reasonable

suspicion drug screening and breath alcohol testing. Drivers can electronically schedule their DOT and non-regulated drug tests and physicals through their mobile devices and process electronic chain of custody forms.

DOT Medical Services

Make sure your transportation team is road-ready. Ensure driver physical fitness by scheduling DOT physicals performed by DOT-certified examiners. Connect with testing providers that perform a standard DOT-approved drug test and handle random, post-accident, or reasonable suspicion drug screening and breath alcohol testing. Each of these services complies with DOT regulations.

Industry-Specific Health Screenings

Ensure the medical and health checks you order are correct and compliant with your industry. Our platform can schedule services for healthcare professionals such as vaccinations, titers, TB testing, and expanded panel options. Set up specialized testing for safety-sensitive positions such as forklift operators, assembly line workers, and inventory specialists. You can also add standalone services for industries energy that require additional testing, including things like vision testing, audiograms, respiratory clearance, and chest X-rays.
