

Components

PATQER's products include electrooptic components, optimizing the operation of diverse optical systems and devices, e.g., enabling better imaging and detection. For instance, our switchable polarizers and “Predator” films can improve the resolution of standard detectors (photodetectors, cameras, etc.) by providing additional information that is not accessible by traditional approaches.

We offer our components only to a very limited number of customers. However, you are welcome to contact us (info@patqer.com) and we will gladly consider your inquiry.
