Overview

AURA - is a newly launched cryptocurrency, which will generate a passive income for its investors over a period of time. It will also take place for a new exchange system development. Aura Token is created mainly for users to trade openly through the BSC network. Nevertheless, in the near future, AURA token is going to be launched on other networks for the spread of the token and convenience for users.

The future plan of creating a token exchange system will mainly focus on a safe asset holdings and trades between users. The upcoming project is going to be called “AURA SWP”. Other networks which are going to be added for the project are: Ethereum and Solana.

A part of the gathered funds (8%) are going to be used for liquidity pools and marketing of the token.

Networks

Why we choose **Binance Smart Chain (BSC) Network?**

BSC is only the beginning of the AURA token, this was the most stable and one of the biggest networks that can be used today. Until the project gets up to a stable point, the BSC should provide a safe base to be on. When the token will have enough funds, it will be expanded to other networks, such as Ethereum, Solana and might even be launched on the Polygon network.

Contract/Token information

Token name:

Aura Token

Token symbol:

AURA
