

## MEDEX 3D MODELER

MEDEX 3D MODELER is through the transmission of low frequency vibrations and infrared technology can generate a pulsed, rhythmic action on the tissues.

## MEDEX 3D MODELER

Boasting gentle yet effective infrared technology, this treatment has many vibrating silicone & metal balls target the deepest layers of the tissue, eliminating toxins and stimulating the metabolism, all with no skin damage.

### Advantages:

- ✓ Fast & Effective
- ✓ Comfortable
- ✓ Non-invasive
- ✓ No downtime
- ✓ Works on all Body Parts

## How does MEDEX 3D MODELER work?

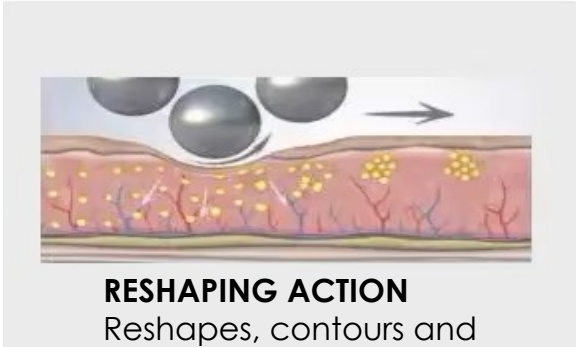

### Slimspheres Therapy Technology

- Body parts are pressured and massaged by rotating balls, and the handle exerts fluctuating pressure on tissues that activate lymphatic and blood circulation, oxygenation and destroy fat depots.
- The principle is that the rotating balls rotates along the roller 360° to generate compression micro-vibration.
- As the rotating ball rotates and exerts pressure on the skin, it produces a “pulsation compression” effect, continuous push-pull kneading action motion.
- The tissue will experience some pressure and lifting, will not squeeze or damage the skin
- The fat deposits are pressurized and thus loosened to finally decompose, reduces and removes cellulite

**5 TREATMENTS**

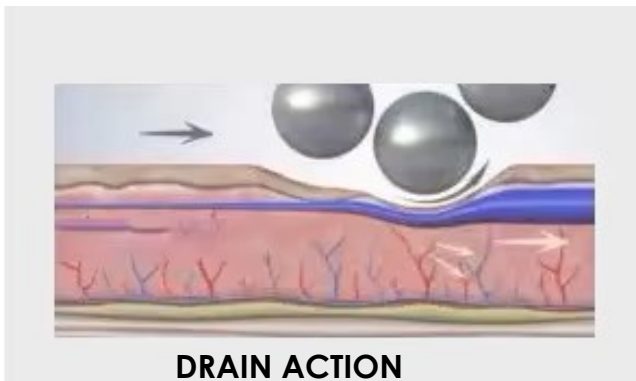

It provides a well-rounded treatment. Initially it restores the normal state of tissues and microcirculation and in later stages work on reshaping and contouring the body

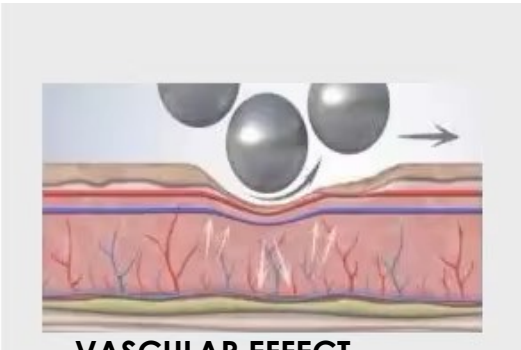

**RESHAPING ACTION**  
Reshapes, contours and smooth out wrinkles

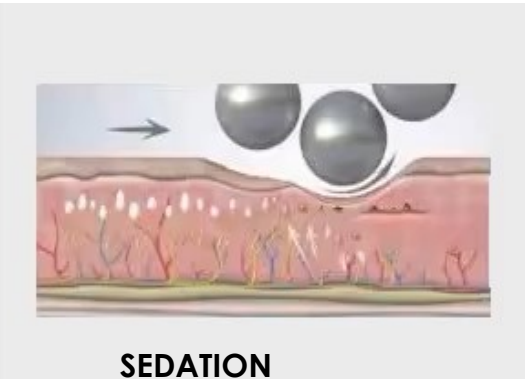

**MUSCLE ACTION**  
Tones muscles and tightens tissue

**DRAIN ACTION**  
Eliminate toxins and help lymphatic drainage

**VASCULAR EFFECT**  
Improve blood circulation and nourish tissues

**SEDATION**  
Improve oxygen and relief pain

## The Benefits of the MEDEX 3D MODELER

### **1. Drainage Action :**

The vibrating pumping effect induced by the Endo roller spheres device stimulates the lymphatic system, in turn, this encourages all the skin cells to clean and nourish themselves and to ease out toxins in the body.

### **2. Build muscle :**

The effect of the compression on the muscles encourages them to work out. This circulates the blood to pump more efficiently, helping the muscles to tone in the area(s) treated .

### **3. Vascular Action:**

Both the compression and vibrating effect produce a deep stimulation at the vascular and metabolic level. The tissue thus endures stimulation that generates a "vascular workout", which improves the microcirculatory system .

### **4. Restructuring Action:**

The rotation and vibration , spur stem cells into healing action. The result is a reduction in undulations at the surface of the skin, typical in cellulite.

### **5. Analgesic Action:**

The pulsating and rhythmic action on mechanoreceptor produce a reduction or the removal of pain for a short period. The activation of receptors improves oxygenation and in sequence, allows for the reduction of tissue inflammation, active both for uncomfortable forms of cellulite and lymphoedema. The analgesic action of the device is successfully used in rehabilitation and sports medicine.

## **6. Cellulite Treatment**

It helps your body's natural drainage system flush out excess fluid, toxins and fat.

## **7. Relief Pain**

In clinical studies, 3D Modeler therapy has reduced pain in some clients by improving tissue oxygenation, circulation, and lymphatic drainage.

The significant reduction of pain in the treatment of tissues with cellulite is a marked improvement in metabolism and an important reduction of toxic substances in the body.

## **8. Reduce Wrinkles**

3D Modeler can help reduce wrinkles caused by lifestyle and environmental factors, such as stress and sun exposure. It also boosts collagen and elastin production along with increased blood circulation.

## **9. Muscle toning and relaxation**

The push-pull stimulates muscle tissue, which improves tone.

## What are the common reasons people elect to have body contouring?

- Giving birth and breastfeeding can take their toll on a woman's shape. Body contouring can help bring back the body to its pre-childbearing form.
- People who lose a significant amount of weight feel healthier, more energetic and lighter on their feet. However, their skin will likely remain stretched and they may want to tighten up and sculpt various areas of their body. Body contouring is the answer.
- As age and gravity push and pull the body out of shape, it's nice to know body contouring is there to bring it back to its natural shape.

## How does MEDEX 3D MODELER Massage Roller Ball works?

The MEDEX 3D MODELER Massage Roller Ball offers multi-directional therapeutic massage for reduces stress, relief of sore muscles and improve recovery

- These tools help decrease muscle pain soreness and headaches while increasing blood flow, range of motion, and overall flexibility.
- Get Deep Tissue Massages – The therapeutic Massage Roller Ball provides multi-directional 360° relief with a smooth, gliding action that is friction-free and doesn't pull on your skin for maximum comfort.
- Ideal for practically all areas of the body, the Massage Roller Ball lets work on large muscle groups or focus on painful knots or trigger points in the neck, shoulders, arms, legs, feet, glutes, and hamstrings.

Pro tip:

- Massaging your neck and upper back area can also help reduce headache pain and frequency!
- Maximum control allows to alternate pressure from a gentle massage to deep tissue release of painful trigger points

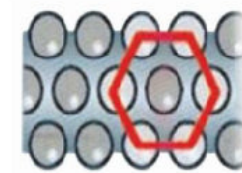

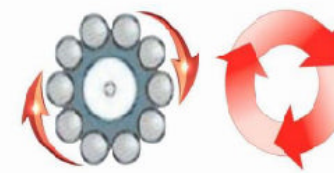

## The Method of MEDEX 3D MODELER

The method is performed through the use of;

- The Handpiece
- Area of treatment – the selected according to the area of desired treatment
- Duration of application
- Treatment Frequency
- The pressure are three forces determining the treatment's intensity, which can be adopted to the condition of a specific client.
- The direction of rotation and the pressure used ensure that micro compression is transmitted to the tissues.
- The frequency, measurable through the variation of speed of the cylinder, generates micro vibration. It works to Lift and Firm, Cellulite Reduction

What areas can be targeted with MEDEX 3D MODELER treatment?

### Body Treatment

- Excess body weight -- Cellulite on problem areas (butt, hips, abdomen, waistline and back, thighs, calve, arms)
- Poor circulation of venous blood
- Reduced muscle tone or muscle spasms
- Flabby or puffy skin

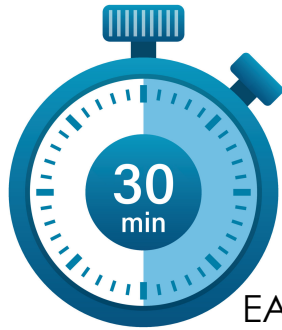

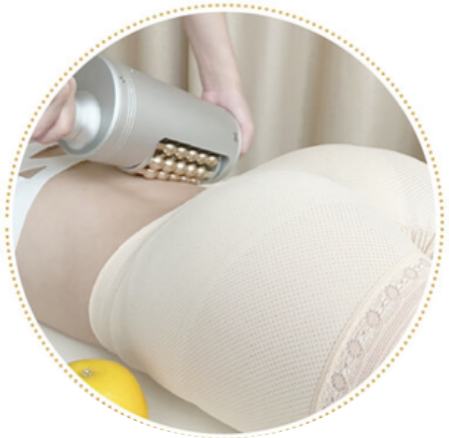

### Face Treatment

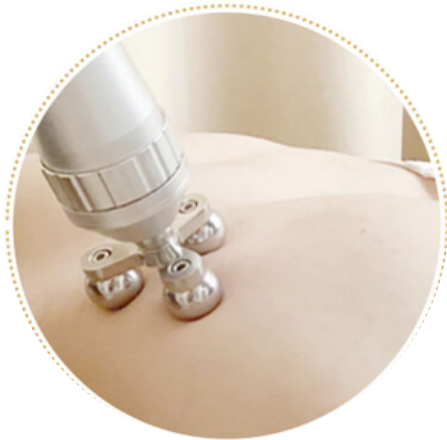

- Smooths wrinkles
- Lifts the cheeks
- Plumps the lips
- Shapes and tones the facial contours
- Relaxes the facial expression muscles

## MEDEX 3D MODELER Treatment Protocol

EACH TREATMENT  
30 MINUTES

TWICE A WEEK

12 TIMES FOR A  
CYCLE

### Treatment protocol

#### Cleanse

- Remove any make-up, oils or impurities.

#### Mark the treatment area

- Set parameters according to the customer tolerable range

#### MEDEX 3D MODELER device

- Apply sufficient cream at the treated area.
- The working head should keep tight to the operation part and roll repeatedly in the treating area.
- Clean the treating area.
- Removed and clean the handpiece head

The benefits when applied to the body

- ✓ Improve lymphatic drainage and circulation
- ✓ Deep detoxification
- ✓ Relieve muscle stiffness and soreness,
- ✓ Decompose subcutaneous fat deposits
- ✓ Eliminate cellulite
- ✓ Reduce cellulite and shape contours.

After a few sessions, your body will immediately reduce its volume by 1-2 sizes!

The benefits when applied to the face

- ✓ Improve the formation of blood vessels
- ✓ Improve production of collagen and elastin
- ✓ Increasing oxygen delivery
- ✓ Relax and regulate muscles
- ✓ Reduce expression wrinkles appears
- ✓ Reduces swelling
- ✓ Fights tissue sagging
