

Rollaction System is the revolutionary and exclusive physio-active body massage system inspired by the masseur's professional movements. By improving on the action of expert hands, Rollaction provides **strength and energy** for the most in-demand body treatments, increasing efficacy with minimum effort. Manual care and technology combine together to provide a versatile tool with proven results. Its efficacy has been tested under physiotherapeutic supervision with surprising results.

Our work system kick-starts the metabolism without being invasive, respecting the nature of the vascular, muscle and skin systems. It restores the balance and harmony of the body.

Exclusively by RÖS'S.
Choose innovation. Choose RÖS'S.

Muscle action
 Increases the supply of nutrients and oxygen

ROLLACTION SYSTEM

- ▶ Muscle toning with decompression of nerve plexuses
- ▶ Skin toning
- ▶ Vascular system toning
- ▶ Disappearance of muscle tension
- ▶ Reduction of surface and deep fat in adipose tissue
- ▶ Increased blood supply to all the tissues treated
- ▶ Stimulation of metabolism
- ▶ Stimulation of the lymphatic system
- ▶ Removal of fluids and toxins
- ▶ Tissue firming

Anti-cellulite. Sculpting. Toning. Circulation-stimulating. Fat-reducing.
 Decontracting. Sports massage. **It really works!**

ROLLACTION SYSTEM

THE NEW PHYSIO-ACTIVE MASSAGE SYSTEM
 THE MOST HUMAN-LIKE TECHNOLOGY INSPIRED IN YOUR HANDS

Vascular action
 Improves venous circulation and lymphatic drainage

Dermal action
 Blood supply to the skin tissue

ROLLACTION SYSTEM

You have an ally.

We are reinventing the professional manual massage in order to give you the perfect tool for beauty and therapeutic treatments. Rollaction increases the strength of your hands. Now you can perform deep massage with the same intensity throughout the day without uncomfortable positions or getting tired, protecting your joints from the continual wear suffered during body massage and reducing daily hard work by up to 80%.

Proven solutions. Loyal customers.

Your customers will experience a thorough, deep and at the same time relaxing massage with spectacular results.

Rollaction will be your greatest ally in the beauty salon and will help you to ensure client loyalty, since you can use our work system in all of your massage treatments with relaxing, draining or activating massages.

Rod
Everyday easy-to-use

RollControl
Integrated IR light and safety sensor

Roll-heads
Sizes for every need. They click into place

Touch screen
Adjustable intensity and speed

BETA stand included

ROLLACTION System REF. 0028460	
DIMENSIONS	Width 490 mm Height 950 mm Depth 380 mm
WEIGHT	19 kg
VOLTAGE	115 W
IR LIGHT	850 nm
MAX. SPEED	140 rpm

The Rollaction work protocol is based on easy-to-learn movements combined with the application of the slimming thermo-active cream, **ThermoACTION**.

Rollaction works through its roll-heads which perform a **series of high-penetration rotations**. This rotation causes friction in the form of kneading on the skin and tissues which, when combined with **pressure**, simulates the effect of a professional's hands and maximises their effect. The controller also projects **stimulating infrared light** to improve results.

The intensity of mechanical energy and the gentleness of your hands combined in a single gesture.

Firm skin

Unlike other systems, Rollaction acts on deep-rooted cellulite and removes unsightly orange-peel skin.

Sculpting

The rotating action dissolves accumulated fat and facilitates its drainage via the lymphatic channels. With Rollaction, getting back in shape becomes a reality.

Toning

Muscle spasms compress the capillaries nourishing the tissue and stop the blood from reaching it correctly. Through deep physio-active massage, the additional supply of oxygen and nutrients nourishes and restores the muscle fibres.

Vascular system

Thanks to the mechanical stimulus, the muscle fibres in the blood vessel walls are activated. The improvement in the circulatory system due to the rise in blood supply increases metabolic activity.

Therapeutic effects

All of our tissues (muscle, bone, connective, etc.) require a good blood supply. Incorrect postures, a sedentary lifestyle, muscle lesions, etc. cause our muscles to spasm, obstructing the paths nourishing oxygen and causing significant imbalances in the locomotor system and even organ dysfunction.

Rollaction acts on entire muscle areas and, thanks to its rotating movement and gradual pressure, it restores circulation and nerve impulses in the affected areas.

Two levels of penetration. Maximum efficacy.

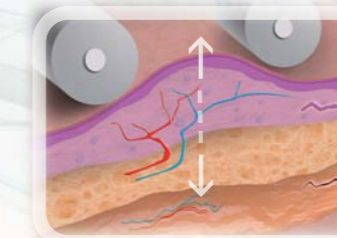

At the dermal level: spectacular beauty results

- Anti-cellulite programme
- Fat-reducing programme
- Toning/sculpting programme
- Circulation-stimulating programme

At the muscle level

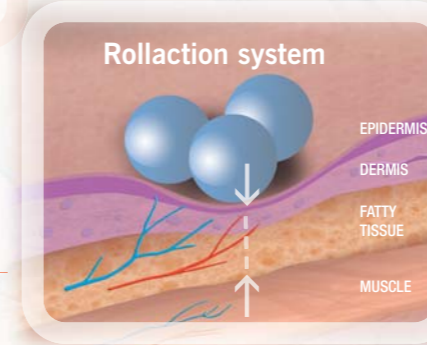

- Decontracting programme
- Sports massage programme

SUCTION.
Traditional systems work by clamping or sucking the skin, causing direct mechanical traction on the surface tissues, without reaching the deep layers. There is therefore a risk of causing flaccidity.

COMPRESSION.

Rollaction acts on all deep tissues without causing any traction, but rather through regular and controlled compression on all tissues, from the skin to the deep muscles.

study 1 Roll action

study 1 Roll action

RÓS'S Estética has conducted a thorough in-booth study of the Rollaction system. The results have been surprising. Its energetic action acts at vascular, muscle and skin levels, kick-starting slowed natural functions and rebalancing our body's performance. With this triple effect, we are able to achieve beauty and therapeutic objectives that cannot be achieved with other more sophisticated techniques.

The study has been conducted in a sample of 50 women with beauty problems caused by circulatory deficiencies caused by a slowed or blocked metabolism. The vicious circle causing these problems was stopped thanks to the system's triple action.

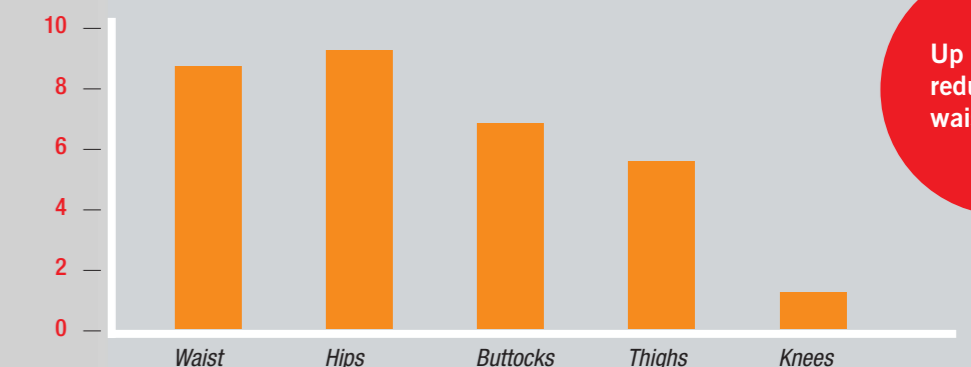

- ▶ **Vascular and lymphatic action:** increased arterial blood supply and venous and lymphatic drainage.
- ▶ **Skin action:** unblocking of the vessels and increased blood supply to all tissues.
- ▶ **Muscle action:** it increases the supply of nutrients and oxygen, toning the muscle fibres and eliminating spasms.

Sample: 50
Gender: *femenino*
Age: *10% of the sample were 30-40 years old
70% of the sample were 40-45 years old
20% of the sample were 45-60 years old*
Visual examination: *localised accumulated fats, overweight, flaccidity, orange-peel skin, inflammation...*

Treatment protocol used in the results study

Total sessions: *between 12 and 15 sessions*
Gap between sessions: *2 weeks*
Average treatment duration: *7 weeks*
Application of cosmetic product: *Thermoaction with lipolytic active substances*

Mean reduction in volume in cm

Up to 12 cm reduction in waist and hips

Mean reduction in volume in cm

Area	Mean reduction in volume in cm
Waist	8.16
Hips	8.58
Buttocks	6.82
Thighs	5.44
Knees	1.3

The reduction in volume due to fat removal from the adipose tissue is proportional to the amount of fat stored there.

A reduction in volume of up to three dress sizes is seen with reduction of up to 12 cm on the waist and hips.

The texture of the skin is substantially improved thanks to the elimination of orange-peel skin and to tissue firming.

REAL results.

IT WORKS
