## Paw Print Genetics: Canine Genetic Health Certificate Testing Results

### Canine Genetic Health Certificate™

**Call Name:** Cody  
**Registered Name:** Balladeer's Take It To The Coda  
**Breed:** Labrador Retriever  
**Sex:** Male  
**DOB:** Oct. 2022

**Laboratory #:** 378423  
**Registration #:** SS36909104  
**Microchip #:** 956000015372558  
**Certificate Date:** March 11, 2024

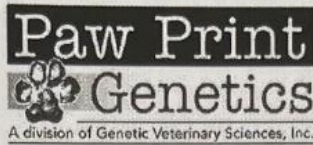

**This canine's DNA showed the following genotype(s):**

Disease	Gene	Genotype	Interpretation
Centronuclear Myopathy	PTPLA	WT/WT	Normal (Clear)
Cone Degeneration (Labrador Retriever Type)	CNGA3	WT/WT	Normal (Clear)
Congenital Myasthenic Syndrome (Labrador Retriever Type)	COLQ	WT/WT	Normal (Clear)
Copper Toxicosis (Labrador Retriever Type) ATP7A	ATP7A	M/Y	Carrier Male
Copper Toxicosis (Labrador Retriever Type) ATP7B	ATP7B	WT/M	At-Risk
Cystinuria (Labrador Retriever Type)	SLC3A1	WT/WT	Normal (Clear)
Degenerative Myelopathy (Common Variant)	SOD1	WT/WT	Normal (Clear)
Elliptocytosis	SPTB	WT/WT	Normal (Clear)
Exercise-Induced Collapse	DNM1	WT/WT	Normal (Clear)
Hereditary Nasal Parakeratosis (Labrador Retriever Type)	SUV39H2	WT/WT	Normal (Clear)
Hyperuricosuria	SLC2A9	WT/WT	Normal (Clear)
Ichthyosis (Golden Retriever Type 1)	PNPLA1	WT/WT	Normal (Clear)

WT, wild type (normal); M, mutant; Y, Y chromosome (male)

Paw Print Genetics® performed the testing on the dog listed on this certificate. See the Laboratory Report for interpretation and recommendations based on these findings. The genes/diseases reported here were selected by the client. Normal results do not exclude inherited mutations not tested in these or other genes that may cause medical problems or may be passed on to offspring. The results included in this report relate only to the items tested using the sample provided. These tests were developed and their performance determined by Paw Print Genetics. This laboratory has established and verified the test(s) accuracy and precision with >99.9% sensitivity and specificity. The presence of mosaicism may not be detected by this test. Non-paternity may lead to unexpected results. This is not a breed identification test. Because all tests performed are DNA-based, rare genomic variations may interfere with the performance of some tests producing false results. If you think these results are in error, please contact the laboratory immediately for further evaluation. In the event of a valid dispute of results claim, Paw Print Genetics will do its best to resolve such a claim to the customer's satisfaction. If no resolution is possible after investigation by Paw Print Genetics with the cooperation of the customer, the extent of the customer's sole remedy is a refund of the fee paid. In no event shall Paw Print Genetics be liable for indirect, consequential or incidental damages of any kind. Any claim must be asserted within 60 days of the report of the test results. Genetic counseling is available at Paw Print Genetics.

## Paw Print Genetics: Coat Color and Trait Certificate

### Coat Color and Trait Certificate

**Call Name:** Coda  
**Registered Name:** Balladeer's Take It To The Coda  
**Breed:** Labrador Retriever  
**Sex:** Male  
**DOB:** Oct. 2022

**Laboratory #:** 378423  
**Registration #:** SS36909104  
**Microchip #:** 956000015372558  
**Certificate Date:** Jan. 25, 2023

This canine's DNA showed the following genotype(s):

Coat Color/Trait Test	Gene	Genotype	Interpretation
B Locus (Brown)	<i>TYRP1</i>	B/B	Black coat, nose and foot pads (does not carry brown)
D Locus (Dilute)	<i>MLPH</i>	D/D	Non-dilute (does not carry dilute)
K Locus (Dominant Black)	<i>CBD103</i>	K <sup>B</sup> /K <sup>B</sup>	No agouti expression allowed
L Locus (Long Hair/Fluffy) - Lh <sup>1</sup> (Common Variant Found in Many Breeds)	<i>FGF5</i>	Sh/Sh	Shorthaired (does not carry long hair)

#### Interpretation:

This dog does not carry any copies of the b<sup>a</sup>, b<sup>c</sup>, b<sup>d</sup> or b<sup>s</sup> mutations and has a B locus genotype of **B/B**. Thus, this dog typically will have a black coat, nose, and foot pads. However, this dog's coat color is dependent on the genotypes of many other genes. This dog will pass one copy of **B** to 100% of its offspring and cannot produce b/b dogs.

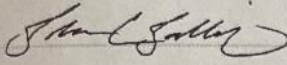

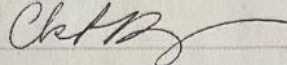

This dog does not carry any copies of the d<sup>1</sup> or d<sup>2</sup> mutations and has a D locus genotype of **D/D** which does not result in the "dilution" or lightening of the pigments that produce the dog's coat color. This dog will pass one copy of **D** to 100% of its offspring and cannot produce d/d dogs.

The K locus genotype for this dog is **K<sup>B</sup>/K<sup>B</sup>** which prevents expression of the agouti gene (A locus) and allows for solid eumelanin (black pigment) production in pigmented areas of the dog. However, this dog's coat color is also dependent on its genotypes at the E and B loci. This dog will pass on **K<sup>B</sup>** to 100% of its offspring.

This dog carries two copies of **Sh** which results in short hair. This dog will pass on **Sh** to 100% of its offspring.

Paw Print Genetics® has genetic counseling available to you at no additional charge to answer any questions about these test results, their implications and potential outcomes in breeding this dog.

## Paw Print Genetics: Coat Color and Trait Certificate (continued)

	
<b>Blake C Ballif, PhD</b> Laboratory & Scientific Director	<b>Christina J Ramirez, PhD, DVM, DACVP</b> Medical Director

Paw Print Genetics® performed the testing on the dog listed on this certificate. The genes/traits reported here were selected by the client. Normal results do not exclude inherited mutations not tested in these or other genes that may cause variation in traits, medical problems or may be passed on to offspring. The results included in this report relate only to the items tested using the sample provided. These tests were developed and their performance determined by Paw Print Genetics. This laboratory has established and verified the test(s) accuracy and precision with >99.9% sensitivity and specificity. The presence of mosaicism may not be detected by this test. Non-paternity may lead to unexpected results. This is not a breed identification test. Because all tests performed are DNA-based, rare genomic variations may interfere with the performance of some tests producing false results. **FUNDUS**

☐ detached ☐ geographic ☐ folds

☐ retinal detachment ☐

☐ retinal atrophy—generalized ☐

☐ CMR/CMR-like retinopathy ☐

☐ other presumed inherited retinopathy ☐

☐ retinal dysplasia ☐

☐ choroidal hypoplasia ☐

☐ coloboma ☐

☐ optic nerve coloboma ☐

☐ optic nerve hypoplasia ☐

☐ micropapilla ☐

**OTHER CONDITIONS**

☐ Unlisted conditions suspected as inherited. Describe in comments ☐

☐ Unlisted conditions suspected as not inherited ☐

**NORMAL**
