

HRT

CUSTOMIZED HORMONE REPLACEMENT THERAPY

As healthcare providers, you understand that hormone imbalances can significantly impact a patient's health and well-being. Hormone replacement therapy (HRT) has become a common approach to manage hormonal imbalances and improve patients' quality of life. However, not all HRT options are created equal, and many patients require personalized solutions that go beyond conventional pharmaceuticals. This is where our compounding pharmacy can play a pivotal role in meeting the unique needs of your patients with our customized HRT compounds.

One **advantage** of our compounded HRT compounds is the ability to combine multiple hormones in a single preparation, allowing for convenient and simplified dosing. This can be especially beneficial for patients who require multiple hormones as part of their HRT regimen, as it eliminates the need for multiple prescriptions and simplifies the treatment process. Common formulas include topical **Testosterone** cream for men, topical **BiEst/Progesterone** cream for women, and vaginal testosterone cream for women.

HRT DOSAGE FORMS:

CAPSULES
CREAMS
GELS
SUBLINGUAL DROPS
SUPPOSITORIES
TROCHES
