## DERMATOLOGY FORMULATIONS

Our compounding pharmacy is proud to offer a wide range of dermatology compounds that can be customized to suit the unique needs of each patient. Our compounded creams, gels, ointments, and liquids are formulated to address various dermatological conditions such as eczema, psoriasis, hair loss, skin lightening, acne, stubborn fungal infections in the nail, pruritus, lichen sclerosis, hirsutism, and more. We understand that each patient's skin is different, and our dermatology compounds are carefully formulated with gentle and hypoallergenic bases to minimize the risk of adverse reactions.

With our extensive selection of active ingredients, we can mix and match to create compounds tailored to the specific requirements of each patient. Our goal is to help patients achieve optimal dermatological health.

One of our favorite formulas is a topical nail solution that combines powerful penetrating agents with potent antifungal actives that can be applied directly to the affected toenail, alleviating the need for oral antifungals.
