

ENT

CUSTOMIZED

EAR, NOSE AND THROAT FORMULAS

Patients with otic infections, mucositis, chronic sinus infections, and other ENT conditions often require targeted and individualized treatment options that may not be readily available through commercially manufactured medications. Our pharmacists can compound medications in different strengths and forms to optimize therapeutic outcomes and minimize side effects. This flexibility allows us to create individualized treatment plans that align with your patients' specific conditions, symptoms, and treatment goals.

One unique solution for patients with chronic sinus infections or recurring allergies comes in the form of nasal irrigation capsules. These capsules contain customized ingredients that may include antibiotics, antifungals, and biofilm inhibitors, which are individually tailored to the specific condition of each patient. The patient simply opens the capsule and adds the dry ingredients to their saline nasal irrigation solution. This solution is then used to irrigate the sinus cavities. This innovative approach provides a convenient and effective option for patients to rinse their sinuses, extend product shelf-life and improve cost-effectiveness to help you optimize therapeutic outcomes.
