

ORGANIC FERTILIZER

Organic

Producing products that improve soil health which in turn allows plants, crops, and landscapes to grow without the need for synthetic fertilizers.

Innovative

Pioneering next generation soil and plant care, using carbon-based technology with no animal by-products.

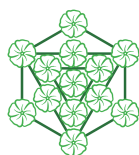

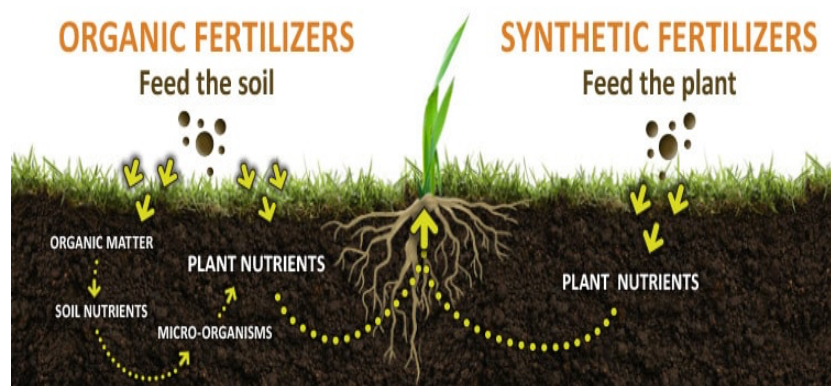

Sustainable

Providing solutions to social, economic, and environmental problems through our technology and advocacy.

A complete earth-friendly package of organic fertilizer, soil amendments and bio-stimulants designed to increase nutrient efficiency, combat abiotic stress, and improve qualitative parameters in crops. Each of these parameters improve the overall health of the crop and create economical returns for farmers of all kinds.

Our goal was/is to reduce the use and need for synthetic or salt-based fertilizers /pesticides in commercial farming. All our products are rigorously tested to ensure consistency and guaranteed analysis that all our products are of the highest quality.

With our partners having multiple manufacturing and processing facilities in 3 countries we have broad control of the manufacturing process of our products and we are able to create custom product blends to match the needs of individual crops and soil conditions.
