Woodland, WA, USA

## Hemerocallis

Gracing North American gardens since the 17th century, daylilies have long been a favorite of gardeners for their vibrant flowers and ease of care. Over the centuries, hybridization has expanded daylilies from their primary cultivars of the Tawny Orange 'Ditch Lily" (*Hemerocallis fulva*) and the Yellow Lemon Lily (*Hemerocallis lilioasphodelus*) into the thousands of registered cultivars that are known today.

Although often mistaken for a lily due to their common name of 'Daylily', Hemerocallis have a thick, fibrous root system while their *Lilium* counterparts grow from bulbs. As their common name suggests, the flowers of these hardy perennials last but a day (named for the Greek words (*hēmera*) "day" and (*kalos*) "beautiful") but can continue to produce new blooms during the growing season.

Hemerocallis are drought tolerant, hardy, and relatively pest-free, making them a favorite of both landscape professionals and home gardeners alike.

Species : *Hemerocallis fulva* : *Hemerocallis lilioasphodelus* Family  
Hemerocallidaceae Original book source: Prof. Dr. Otto Wilhelm  
Thomé *Flora von Deutschland, Österreich und der Schweiz* 1885,  
Gera,

*Wholesale domestic grower of bare root perennials and crocosmia, supplying growers with the highest quality products since 1981.*
