

Valley Vitreoretinal Consultants

Valley Vitreoretinal Consultants specializes in the management of medical and surgical retinal disorders. We are located in Mission Texas where we utilize state of the art diagnostic technology such as Spectral Domain OCT and Fluorescein angiography to help manage a variety of retinal diseases. These test are captured digitally, therefore the results are available instantly for evaluation.

Conditions that we commonly treat include **diabetic retinopathy, macular degeneration, retinal detachment, retinal vein occlusion, and maculopathy associated with epiretinal membrane such as macular pucker and macular hole**. Many conditions can be treated in an office setting such as argon laser for diabetic retinopathy and intravitreal injection of medication for wet age related macular degeneration. While some conditions will require special equipment and are performed in a hospital setting or a surgery center on an outpatient basis. Since the surgery is performed under local anesthesia, patients routinely return home on the same day and follow up in the office the next morning.

Dr. Su is a **board certified ophthalmologist** with specialized fellowship training in the management of retinal diseases. Dr. Su is an experienced retinal surgeon and has been providing medical care in Texas for over 10 years. Dr. Su strives to provide the best possible retinal care for the residents of the **Rio Grande Valley**.

Please feel free to call us if you would like to make an appointment for a consultation with our **retina physician**. New patients are always welcome at **Valley Vitreoretinal Consultants**. You can also e mail us to learn more about the services that we provide.
