# WHAT IS EASYBOX®?

---

The EasyBox is a 100% plastic, ultra-light, ultra-resistant, collapsible, and reusable bin offering a food-safe and economical alternative to cartons, wooden-boxes or steel drums.

Thanks to its patented combination between rigid and flexible elements, the EasyBox combines advantages of both worlds: a unit that is light and foldable, but also protective and stackable.

Extremely easy to use and to manipulate, with a minimal weight, the EasyBox will generate significant freight and cost savings within your operations.

The EasyBox is reusable. Thanks to our EasyBox System (see page 4), once the life value of the unit is exhausted, we will recover the unit and replace it at a fraction of the initial cost.

A proprietary technology of Codefine, the EasyBox is manufactured in our certified production facilities under strict clean-room conditions.

You may also opt for our patented Easylift by Codefine® system for a pallet-free experience.

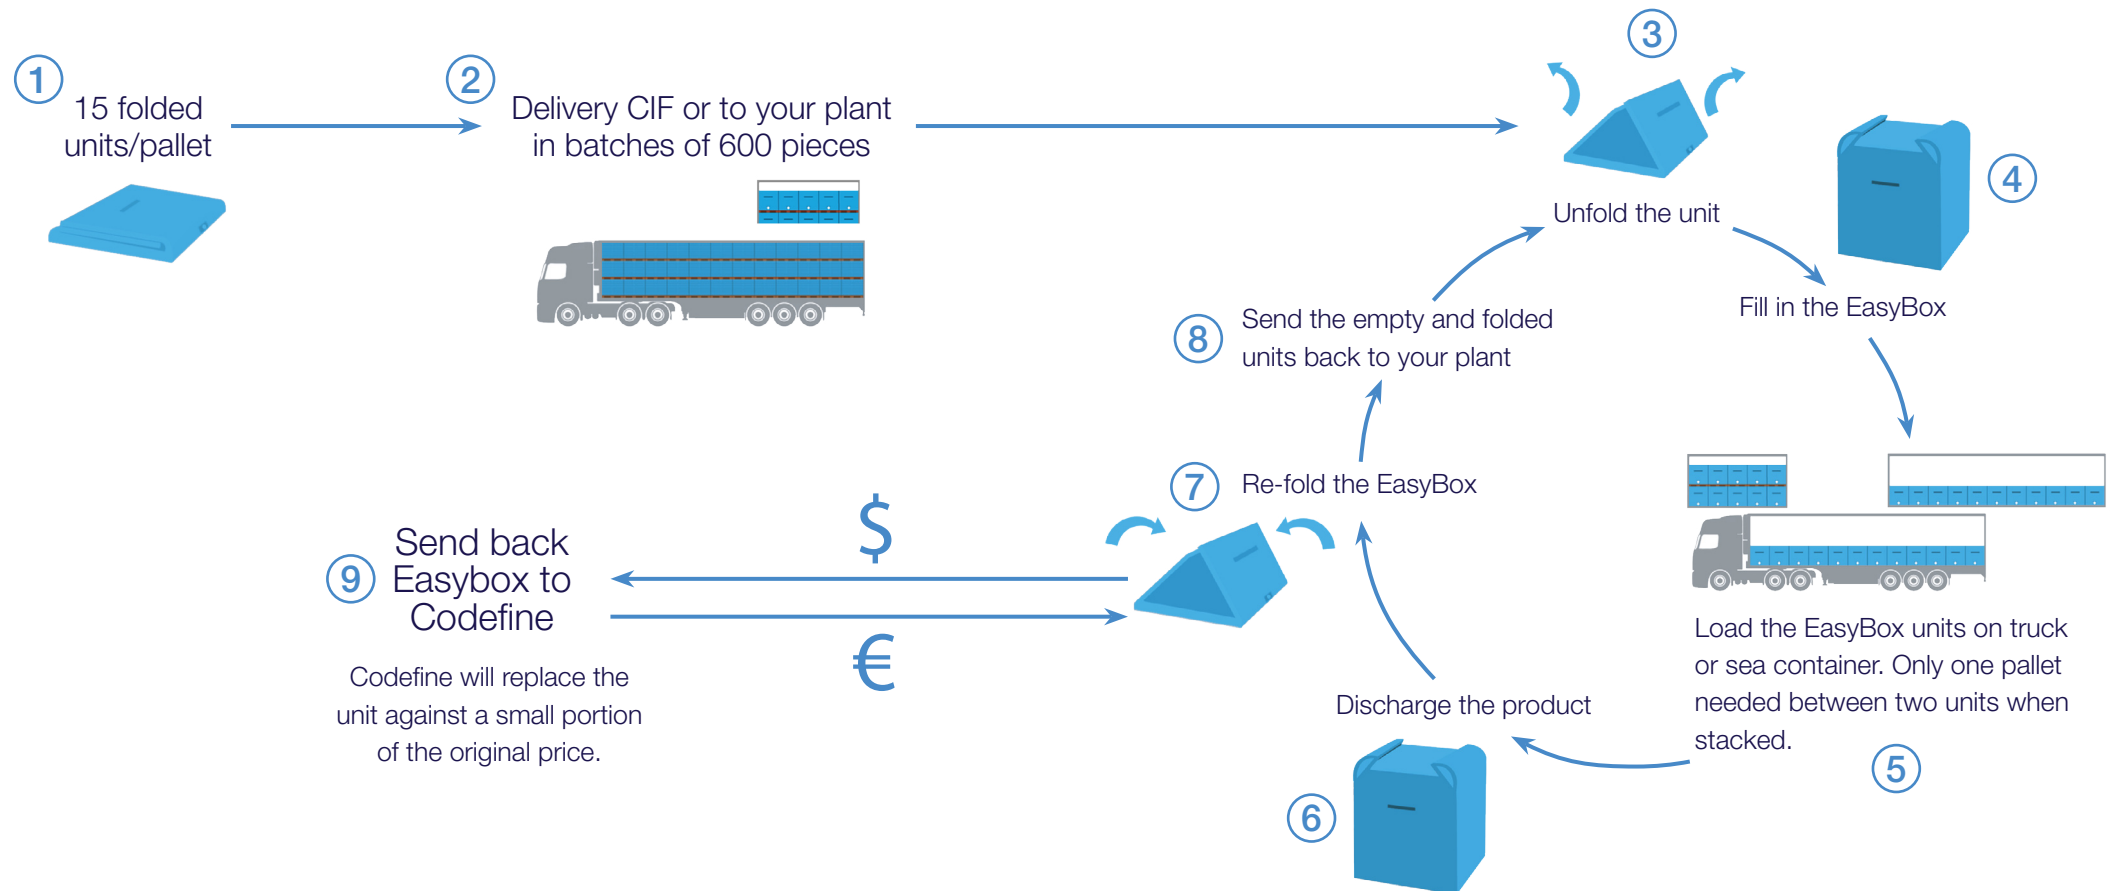

No carton, no wood, no excess overweight. Open the way to cost-savings within your operations.

---

LIVE THE EASYBOX EXPERIENCE!
