

## Prolozone Injections:

Prolozone Therapy is a non-surgical procedure to eliminate or drastically reduce pain by facilitating the body's own natural ability to heal itself.

### How does Prolozone Therapy work?

Prolozone Therapy involves the injection of ozone in and around ligaments where they attach to the bone. The injected ozone increases blood supply and the flow of healing nutrients. It also stimulates the deposition and activity of cells called fibroblasts and chondroblasts. Ozone is a naturally occurring, highly reactive molecule consisting of three atoms of oxygen. Because ozone is highly reactive, it is able to stimulate the fibroblastic and chondroblastic cellular activity, thus enhancing the repair cycle by increasing available oxygen and nutrients to the newly forming tissue.

### Harness the Power of Peptides:

**GHK-CU** In humans, GHK-CU is proposed to promote wound healing, attraction of immune cells, antioxidant and anti-inflammatory effects, stimulation of collagen and glycosaminoglycan synthesis in skin fibroblasts, and portion of blood vessel growth.

**BPC-157** Experimentally has been demonstrated to accelerate the healing of many different wounds, including tendon-to-bone healing and superior healing of damaged ligaments

**Thymosin Beta 4** has a role in tissue repair and plays an important role in the protection, regeneration, and remodeling of injured or damaged tissues.

**AOD9604** Trials are underway to show the application for treatment in osteoarthritis, hypercholesterolemia as well as bone and cartilage repair.

**KPV** has potent anti-inflammatory properties & also inhibits the formation of tumors in the body.

Applied topically, it has been shown to be particularly effective in Psoriasis. It may benefit other autoimmune conditions as well.

Anti-inflammatory, anti-aging, collagen production, repair, & regeneration.

**Epitalon** works on the pineal gland of the brain. Its primary role is to increase the natural production of telomerase, a natural enzyme that helps cells reproduce telomeres. Allows replication of our DNA, so the body can grow new cells & rejuvenate old ones. It has shown a 33% increase in telomere length in somatic cells.

### Other Ingredients:

**Regenallyn** Advanced Cellular Silver (Elemental) 60 PPM, S-Acetyl-L-Glutathione, L-Glutathione Tripeptides (Reduced), N-Acetyl L-Cysteine (NAC), Beta 1.3 Glucan, Elderberry (Sambucus Nigra), Lipoic Acid (R-Fraction), Curcumin C3 Complex® (Turmeric extract standardized to 95% Curcuminoids), Gingko Biloba, Alpha-glycerophosphocholine (Alpha-GPC), CDP-choline (citicoline), Bacopa (Bacopa Monnieri), Acetyl-L Carnitine, Ginseng (Panax Ginseng), L-Theanine, PQQ (pyrroloquinoline quinone), Magnesium, Zinc, Methylcobalamin, Resveratrol, L-Arginine, L-Methionine, L-Glutamine-L-Carnitine, L-Tryptophan, L-Isoleucine, L-Leucine, L-Valine

**B12/Methylcobalamin** 10,000 mcg/ml

Prolozone Injection Prices	
LOCATION	PRICE
Neck (4)	\$200
Lumbar (4)	\$225
Lumbar (2)	\$175
Hip	\$150
Shoulder	\$150
Knee	\$150
Small Extremity	\$100
Neuro Ozone Therapy	\$25
