GOOD EARTH COTTON®

World First Carbon Positive Cotton

Block chain traceability in real time through Fiber Trace

Good Earth Cotton® is a modern regenerative farming program that empowers global producers, communities, and members of the textile supply chain as agents of change through an environmentally beneficial approach to global cotton and agriculture.

Smart farming practices to minimise the global environmental footprint of cotton, and to maximise soil health.

Elevates the role of the growers and agronomists, ensuring full participation in the future of our industry.

Utilises verified primary impact at a farm specific level, capturing point-source data on Scope 1,2 and 3 (select) emissions.

Every step we take is towards a carbon positive future - today in Australia, tomorrow, we hope the world.
