

GD&T Users Group

It is a goal of Profile Services to help Canadian mechanical industries gain the full value of GD&T. This requires that industry develops, fosters and shares the skillsets beyond individual companies or even local labor pools. GD&T must be supported through a Users Group that leads and supports the development of its member organizations and individuals.

Watch this space for further information.

In the meantime, contact Jim Sykes if you are interested in discussing a GD&T Users Group.
