# PURESTYLE™

The detailing options on PureStyle are endless due to the technology of the continuous wrap of components (all surfaces are wrapped versus three sides).

PureStyle provides flexibility in color, design and style.

The continuous wrap on PureStyle eliminates potential for delamination.

Traditional finish quality concerns such as roughness, peeling and cracking are nonexistent.

The effects of light exposure and aging on PureStyle are minimal in comparison to wood finished products, as shown in the four outlined areas and proven in our accelerated UV testing.

PureStyle performs above standard requirements in heat resistance testing.

PureStyle is resistant to moisture as well as stains from common household foods and detergents.

There is ease in cleaning PureStyle due to its smooth surface and durability.

- MBCI assembled products are Environmental Stewardship Program (ESP) certified, which means manufacturing practices are employed which reduce the impact on the environment and our neighbors.
- MBCI assembled products are made with materials that meet the California Air Board (CARB) emission requirements for formaldehyde.
- PureStyle is a proven technology. Similar materials have been sold in the UK & European marketplace for over 16 years.

- The PureStyle material is more stable vs. wood products which tend to contract and expand in changing environmental conditions – no moving joints or shrinking center panels.
- MasterBrand Cabinets, Inc. has conducted hundreds of lab tests to verify performance of PureStyle and ensure that our products meet KCMA and MBCI standards.
