

Optimise your Water Treatment Plant using UV254

An easy installed UV254 system used for optimising your process. Self-maintained with integrated cleaning technology.

Optimise your Water Treatment using UV254

Measure several parameters from a UV254 sensor and connects via 4-20mA which relays information to the control room. Dedicated relay can trigger the probe cleaning cycle.

Measurement of natural organic material (NOMs)

UV254 measurement provides you with a fast, responsive and cost efficient means of managing your process. UV254 aids measurement of aeration management, chemical dosing or monitoring your UV disinfection performance.

Ensuring Accuracy of your Measurement

Keeping readings drift free, the chemical free solution to remove fouling on your instrument.

Designed to work Photonic Measurement flow cell.
