

Post Procedure Care & What to Expect - Client Copy

DAY 1: Check every hour for 'weeping' and gently blot off fluid with a clean damp cotton round or tissue... **DO NOT LET FLUIDS DRY AND FORM A SCAB ON YOUR SKIN...** Gently wash your brows with a mild soap that evening, rinse, and dry with a clean tissue.

Days 2-10 (or until scabs have peeled off):

Wash with soap and water 2x/day. Dry, then apply tiny (rice sized) amount of ointment.

(But if you have oily skin, do not apply any ointment unless the area feels itchy.)

- Avoid watering area as much as possible. Avoid watering brows in shower, so face away from the water stream.
- Avoid exposure to excessive moisture or humidity such as facials, saunas, steam, hot tubs, swimming, excessive **sweating**, long steamy showers.
- **Avoid sleeping on sides of your face, as this might prematurely remove scabs.**
- Do not scrub or pick at treated area. Keep your hands clean and avoid touching the treated area.
- Do not expose area to direct sun or tanning beds.

Day 1

I LOVE my new brows!!!

Day 2-4

UGH! They're a little too dark!

Day 5-7

They're patchy and peeling!

Day 8-10

My brows are gone!!

Day 14-28

Oh wait! The color is coming back!

After Touch-up

I LOVE THEM!!

Please schedule your followup no less than 8 weeks from your initial appointment to ensure better color retention and shape, and to be eligible for initial followup pricing.
