

Complete Retail

Auto Order Module

The Problem:

- Store staff spends a lot of time ordering inventory.
- Items are out-of-stock causing missed sales and customer frustration.
- Items are over-stocked causing high inventory carrying costs, increased labor ,and increased back-stock storage space requirements.

The Solution:

The Auto Order Module of Complete Retail!

How Does It Work?

- Vendor's are set up for auto ordering. (Identify which day(s) of the week the orders should be created and how the order should be sent.)
- Items that are to be auto ordered are identified and an ordering method is selected. (Build-To an inventory level, Minimum inventory level, or Movement based inventory ordering.)
- On the order day for the vendor all items that are marked for auto order are ordered using the selected ordering method.
- If the orders are set up to print they are on the back office printer in the morning; if the order is to be sent via e-mail they are emailed during the night.

Features:

- Easy to Use
- Print or E-mail Purchase Orders to Vendors
- Order Using Three Different Methods

Benefits:

- Decreased Time Ordering Inventory
- Lower Inventory Carrying Costs
- Improved Inventory Availability
- Improved Inventory Control
