Temperature Monitor

The Problem:

- Coolers/Freezers can break down or begin having problems without being noticed.
- We don't always know when a piece of equipment is not running efficiently.
- It is hard to get store staff to check, record, and report cooler and freezer temperatures.

The Solution:

The Temperature Monitor Module of Complete Retail!

How Does It Work?

- Temperature probes are installed in each area that you would like to monitor.
- Each probe is configured for the acceptable temperature ranges and defrost cycles.
- Temperature is read from each probe and recorded.
- If the temperature is outside of the acceptable range for longer than the normal defrost cycle, an incident is recorded and the appropriate person will be e-mailed and/or called to be notified about the problem.
- Historical graphs showing temperature fluctuations can be reviewed for any probe to help identify potential problems.

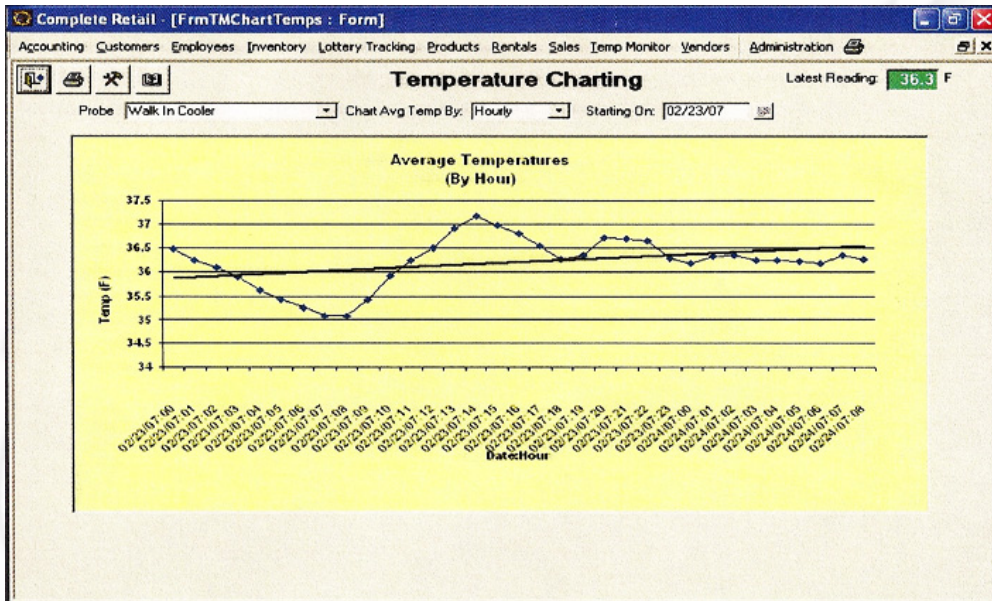

Features:

- Monitor and Track Cooler/Freezer Temps Over Time
- Identify Problems Early; Before Actual Breakdown
- Automatic Problem Notification Via E-mail or Phone

Benefits:

- Head-Off Equipment Problems
- Reduce Energy Consumption
- Reduce Damaged/Spoiled Products
