

# COVID-19 VACCINE INJURY : REMEDIATION PROTOCOL

COVID-19 PROCEDURE INDEX

Produced by: D.S.M.P. : Deep State Mapping Project

The first step to recovery is acknowledging that you have participated in an experimental program, and therefore cannot be sure as to what you were even injected with. Evidence has shown that different

batches of COVID-19 vaccine have yielded widely variable results, from benign to lethal. Suspected toxic ingredients may include spike proteins, graphene oxide, snake venom, mRNA, animal retroviruses, and nanotech-

nology. Approaches to treatment may be systemic, or focused on specific symptoms. An overall diet and lifestyle adjustment is also be required to shift away from a toxic "mainstream" pattern of consumption to a more organic, and health-promoting way of living.
