

Smooth with High Performance

ARES MEDİKAL

HYDROPHILIC COATED GUIDEWIRE

Usability

Hydrophilic Coated Guidewire provides for smooth access with precision handling. The friction is kept minimum thanks to its wise design.

Reliability

The smoothly tapered structure and increased traceability makes way for the procedure success.

Quality

Hydrophilic Coated Guidewire, marked with CE and ISO certificates, are particularly developed for safe application and successful operation.

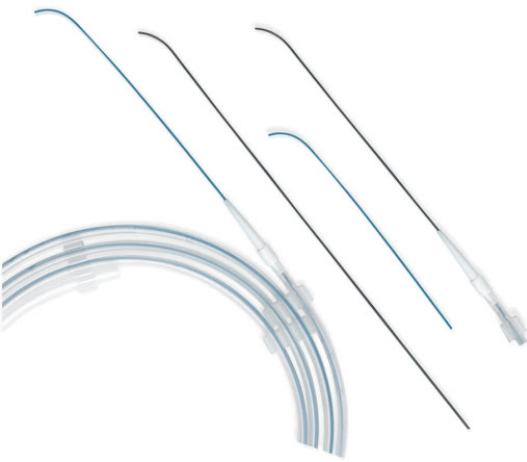

ARES MEDİKAL

HYDROPHILIC COATED GUIDEWIRE

Guidewires for angio operations are metallic tubes to be inserted into the patient's vascular system. Guidewires are designed to navigate vessels to reach the desired segment. Once the tip of the guidewire arrives at the desired segment, it acts as a guide that larger catheters can rapidly follow for easier introduction.

The J curved tip helps to navigate various vessel anatomies. With its floppy tip and stiff body Ares Hydrophilic Coated Guidewire minimizes the risk of vessel trauma and provides increased usability. Its hydrophilic coat enhances the lubricity and eases the handling.
