# Choice is a beautiful thing.

Royal® Crest Siding comes in a selection of styles that vary by width and pattern. They all capture the look of natural wood in their own way, while defying the effects of time and weather.

- **.040" thick panel**
- **Available profiles: D4, D4D, D45D, D5, D5D, D4 Vertical & S8**
- **Beautiful low-gloss cedar woodgrain captures the look of natural wood**

## A sustainable choice is even better.

Not only is Crest Siding available in a wide selection of colors and profiles, it's also remarkably green. Lightweight, yet durable, it never requires painting or staining. For Crest, sustainability is a lifestyle, not a fad. From production, which starts in facilities that recycle virtually all scrap materials, to manufacturing, transportation and installation (did we mention no hazardous materials are emitted when it's cut into?) it's a clear frontrunner in the cladding game.

- **Manufactured from recyclable materials**
- **Rivals cedar in overall green performance**
- **1/3 the environmental impact of fiber cement**
